# The Complete Chester, Buttercup, and Po
Benjamin Taylor

## Chapter One: Chester and Buttercup meet Po

On one strange night there were two animals; a hedgehog and a dog. Both of them were ordinary bystanders; living a normal life. No danger, no mishaps, and no crazy adventures. Until this night all of that changed. All was quiet, no sound was made. Then there was a bright orange light in the sky; it got bigger and bigger until it was gone and there was a loud CRASH! For some reason only Chester and Buttercup heard it. Buttercup was scared and didn't go straight away, but halfway across the outskirts of Sanfransokyo, Chester didn't hesitate to find what that crash was. It took him a while to find the wreckage, and soon Buttercup decides to get up and see what she can find. Soon Chester is giving up, and when he's about to go home he meets Buttercup. They are too tired to keep looking or do anything so they agree to meet up in the forest tomorrow at dawn.

7:30 AM, Chester absolutely scares Buttercup by knocking at her window. She threatens to wallop him and they go on their search again. I feels like they were destined to find the wreckage because there were no police there. They start looking, talk, and finally they find it. Chester is like, "it's just a ball of metal we tried." Buttercup isn't giving up yet. They try for 2 and a half hours to open the ball, but it doesn't budge. Chester suggests they move it somewhere safe. So they move it all the way to Buttercups farm. Buttercup allows Chester to stay with her while they try to open it. Here are the list of ways they try to open it over a WEEK!

1. Chester says to Buttercup, "Stand back I got this." He then struggles for 30 minutes unimpressively.
2. Buttercup goes in a very peaceful way, "Listen I know you don't want to open, but it's for the common good." It fails.
3. Chester stares at it very intensively saying, "You want to open, you need to open, there is nothing better than opening." It too also fails.
4. Buttercup's peacefulness turns into her nasty side, "Fine, don't open! See if I care!" Her cute nastiness at it fails also.

5. Chester starts to flex his arms, tries to open it while making exaggerated strength noises. I wonder why they try.
6. Buttercup comes back from the house with a ridiculously small lock pick, and tries so hard to open it. This is starting to get sad.
7. Chester starts shacking it, rolling it down a cliff, and even put TNT on it. I wonder how he got TNT.

Monday, January 6, 2025, Chester and Buttercup wake up, eat breakfast, and head outside. In the night they heard a lightning strike close by, but they didn't really think about it. They see that the ball was broken in half; likely by the lightning. Chester looks inside and… WHAM! Buttercup is terrified. A big, fat, always hungry animal jumps out. Buttercup takes one look and falls down in laughter. It's a panda. He's like, "What's so funny?" Buttercup finally gets a hold of herself and says, "Why your a fat panda that knocked out my friend!" "Wait my friend?" She then rushes to Chester. "Why did you hit him!" she asks. The panda said, "Because he laughed at me and said your a fat panda like you said. "Okay I'm sorry I said that Mr. panda but thats no reason to hit him!" "Oh I'm sorry that I hit him and you don't care about my feelings." (in a very mocking voice) Chester regains conscious and is not happy, "Well what about my feelings eh?" The panda gets the feeling he's not wanted here and leaves.

At this point Chester and Buttercup are finished… for now. Chester stays with Buttercup for 3 more days and then leaves. Every once and a while they see a figure that looks like the panda. Once Chester tried to walk towards it but it immediately went away. Buttercup and Chester kept in touch a lot and became close friends. They sometimes wish they could get acquainted with the panda, but that was a long gone thought now.

## Chapter Two: Supercar and Strike Eagle

The date is Saturday, February 1, 2025. A month after the panda incident. Buttercup and Chester have taken different interests. Buttercup is interested in cars that can transform, and Chester in interested in Aviation; specifically Fighter Jets. Buttercup goes to multiple different car companys and watches hundreds of different transformer shows and movies. She does the math and figures out that it would cost around $1 billion dollars. Not even taking into

account of the work hour cost. But she manages to sell the pod the panda came in for $12 trillion dollars. She shares half of it with Chester. 6 trillion dollars is more than enough to make the super car. Here is how the car works. The wings are the doors and trunk, the engine is in the hood, the body is in the trunk and back seat.

While she is waiting for her car to be built, Chester is busy finding a way to buy a fighter jet. He could just build one but that would be costly. He decides to buy an F-15 Strike Eagle from the USAF. He then hires an engineer and mechanics to design it to change into a Lamborghini. Both Buttercup and Chester show off their new transformers. They have a car and air race. They both are on the Airforce and Army reserve. If the Airforce or Army needs them they can Immediately jump into action.

This is Chester's

This is Buttercups

Here are two missions Chester and Buttercup went on. Mission "Lost Sheep." Buttercup got a call from the USAF and they told her they lost a fighter jet somewhere in the Alps. They needed her to go and find it and bring it back. She drove her Bugatti to the air force base and took off in her F-22. It was about 20 minutes until she found what looked like another jet. But it was MIG-29, a Russian plane. It was attacking the fighter jet she's looking for. She Switched to Air-to-Air-Missiles and tried to lock on the MIG. But the MIG saw her and took evasive maneuvers. She was right on the plane's tail and switched to guns, took aim and fired. 3 clear shots in the engine and it blew up. She escorted the other fighter jet back to the USAF base and she got the medal of honor (since she was never in combat before.)

Here is Chester's mission. Operation Eagles and Mice. The USAF tells Chester that they need him to fly another Strike Eagle in this operation. The USAF are going to bomb an important military base of the Russians. This

base was 10 Acres, has multiple Anti-Air-Artillery, and tons of soldiers. The worst part is that there is an air force base nearby. So the Strike Eagles have to to stay hidden until they can bomb the base and hope they don't get seen. 10 F-15s take of in the pacific on an aircraft carrier towards Russia. It's a long 15 minute journey to the base; they don't get seen by radar and bomb the base. But when they start bombing, 15 MIG-29s are dispatched. Chester's Jet radar see's them first and he says, "15 Bandits, 9 o'clock, level!" Immediately one of the pilots suggests they split up. So they split up into two flights. One going right and the other going left. The MIGs split up into 8 and 7; going after each of the Eagles. The Eagles only have their gun, no missiles. One of the MIGs fire on the Eagles and two of them go down. One of the Eagle pilot does a loop the loop and gets on one of the MIGs tail. Chester dives into a valley, and two MIGs follow him. Chester swerves through the valley and one of the MIG pilots crash right into the mountain face. The other MIG fires a missile and Chester fires flares and chaff. He does a loop the loop and fires and destroys the MIG. When he levels flight he see's that he is the only one left. There are 3 MIGs left. Chester is on the tail of one of them; he aims, pulls the trigger and BOOM! The two MIGs are now on his tail; one of them fires a missile and it flies right by Chester's cockpit. Chester now puts on afterburners and head for the aircraft carrier. He notifies them of his position and requests help. They don't have anymore aircraft left. But Chester then gets low to the ground and changes into the car and hides. It works; and the MIGs go away.

Here are some descriptions of some words.
F-22 Raptor is a stealth Interceptor Fighter Aircraft.
F-15 Strike Eagle is an Interceptor Fighter Aircraft.
MIG-29 is a Multirole Fighter Aircraft.
USAF Stands for United States Air Force.
AAA (Anti Aircraft Artillery) is a large gun on the ground that shoots planes down.
AAM (Air to Air Missile) is a missile that is shot from an aircraft to shoot another aircraft down.
Bandits mean enemys.
9 o'clock is to you left.
Level in aviation means the plane is level to your height.

# Chapter Three: the Return of Po

Wednesday, March 5, 2025. A month after the events of Supercar and Strike Eagle. Chester and Buttercup are cruising down the highway in Chester's Lamborghini when they notice a glistening object in the sky. Buttercup calls for Supercar while Chester goes up in Strike Eagle to find out what it is. Chester notices that it has locked on to him; Chester locks onto him, arms his Air-to-Air Missile but doesn't shoot in case of friendly fire. He finally make a close fly by and see's that it's the panda 2 months ago in a MIG-29!

He calls Buttercup saying, "It's that lunatic panda from 2 months ago! What should I do?" Buttercup say, "Take him out of the city, I'll get firing clearance from the governor." So Chester gets the panda to follow him to the outskirts of the city. He had to evade tons of gun firing and missiles. He finally gets word from Buttercup to open fire. He shoots missiles, guns, and rockets but nothing lands. The panda does the same but Chester is just too good. Finally Buttercup gets in the air and shoots the MIGs engines out. The MIG lands in the dessert and the panda gets out. Chester and Buttercup land and walk towards the panda. Chester says, "What is your name?" The panda say, "Po" Chester says, "Why did you attack us?" Po said, "Because I was scared, I didn't want you to take me hostage." Chester says, "You speak truth in that, you did seem nervous." Buttercup asks him, "If we let you go what are you going to do?" Po says, "I shall probably go to my home in Canada." Chester suggests, "How about you come and live here in Sanfransokyo? You, me, and Buttercup can all be on the same side and city?" "Give me time to think about it." Says Po. "For the meanwhile I am going to be in Canada."

Po went back to Canada, Chester and Buttercup went back to their normal lives. They both got the Silver Star Medal. Chester had always tried to get a hold of Po's MIG intercom to talk to him.

## Chapter 4: Long Lost Friend

Monday, April 7th, 2025. Chester and Buttercup get assigned a mission. The mission is that they are to bomb an ammunition camp in Japan. Chester and Buttercup drive onto the aircraft carrier and transform into jets. Buttercup's plane is fixed to be able to land on carriers. They are to fly to the munition camp, bomb it, and return safely before enemy aircraft are dispatched. Chester and Buttercup take off from the carrier and head for the camp. They reach it undetected and bomb it successfully, but they don't realize that enemy aircraft were already in the area. The enemy has locked onto Buttercup's plane and fired an AAM. Chester looks to his side and see's an orange light. He immediately says in the intercom, "Break down left! Missile inbound, 7 o'clock!" Buttercup immediately breaks left and fires flares. Chester turns towards the plane and fires two AAMs. They hit the enemy plane. Chester see's three more enemy planes and the missile is still on Buttercup's tail! BANG, the missile takes our one of Buttercup's engines. Chester tells Buttercup to leave, she doesn't want to but she has to. Chester faces the enemy head on. He shoots one of them down but two more were coming. Chester is panicking, he knows if he fights he will be shot down, but if he runs away he will also be shot down.

Buttercup is making her way back to the carrier with one engine out. She gets on the intercom and tries getting a hold of Po. This time Po actually picks up. She tells him that Chester is trying to fight 4 enemy aircraft alone! Po already knows that he needs his help, but will he get there in time? Buttercup is lining up with the carrier, she slows down, puts her gear and hook down, and lands without danger. But what about Chester?

Chester is in a 1v4, and is already taken gun shots. He shot 2 planes down but one joined the fight. Chester is now at his lowest. He feels like there is no hope left for him. But, there is an object coming; its purple, its foreign, it's Po! Po shoots down one of the enemy planes and together, Po and Chester defeat the enemy. But they're not out of the fire yet. In the process, Po's fuel went low and Chester's tail hook malfunctioned. This means that Po needs to land on the Aircraft carrier and Chester will have a hard time landing. Po lands first; his plane wasn't designed to land on carriers. He slows down to 90 knots, flaps down, airbrakes on, and… bump, he lands. Chester on the other hand is flying the much heavier F-15 than the MIG-29. He barely makes it and almost falls into the sea!

Chester and Buttercup thank Po for his coming to their rescue. And he joins forces with them.

## Chapter 5: A Sad Truth

Thursday, May 1st, 2025. Chester and Po are coming back from a mission. The radio is open on Po's side and he gets a strange call saying, "1st Lieutenant Po, do you read me? This is Commander Walts." Immediately Po starts hyperventilating; Chester asks, "Are you okay?" Po nervously says yes. Chester says, "You sound nervous, are you really okay?" Po's hands start getting sweaty, his stomach is in knots, and he can't think. After awhile he turns on afterburners and runs away. Chester decides to stay within radar range and calls Buttercup, giving her the news. Chester follows Po until he comes to his home, transforms back into a car, and parks at his home. Chester meets up with Buttercup and they discuss the situation. "I noticed that he started hyperventilating and talk nervously." "Do you think he's hiding something?" Says Buttercup. "Yes, I do think he's hiding something; I suggest I tag along with him where ever he goes, and you go to his home to find something out about this." Buttercup agrees and operation Pair to Ace begins.

Every time Po leaves Chester follows him and connects to his frequencies. Buttercup then goes to his house and takes pictures and looks for anything suspicious. Buttercup finds lots of papers that have scenarios. One of them is if hundreds of aliens attack, what can I do, what would happen. Buttercup takes a picture of all the papers and leaves. Chester on the other hand, finds out something a lot worse. Somebody on Po's radio is telling him that if he doesn't leave, they will attack and destroy the whole planet! Po argues with

the person saying, “why do you care about me, what do I know that you want?” The person tells him that he is the smartest panda of their kind. Chester decides he’s had enough; he breaks off his flight and makes it back to Buttercup. Buttercup and Chester discuss what they found out and it left Buttercup in tears. Buttercup didn’t want Po to leave, but if he didn’t the Earth would be destroyed.

Chester decided to go and confront Po. Chester said, “I know about the radio call, the papers of scenarios, the pandas. What are you going to do?” Po is in shock, but knows he has to talk, “I don’t know, I have 6 days to think about it. I don’t want to leave you guys or this world, but it would be destroyed If I didn’t.” Chester suggests, “what if you tell him no, since he doesn’t know that you have me and Buttercup, we might be able to defeat them.” Buttercup appears through the door and says, “I agree with Chester, you can’t leave without a fight!” Po thinks and says, “Okay but here’s what we need to do. The will use Supernukes, nuclear bombs more than 10 times the strength of our bombs. We will need to take out the spaceplanes that hold the Supernukes first. We shall use drones to find out which spaceplanes hold them. And we will need to make our planes hold oxygen too, the fuel supply will be 2 times more and the canal for the air will hold oxygen.”

For the next few days they mod their planes to be space worthy. Then they spend the last few days on making drones. When the last day comes Po gets a call, and he says he will not leave. So they turn on their radar and wait for the aliens. Soon there is a dot on the radar, then another one, until there are over 50 dots on it. Immediately Chester, Buttercup, and Po race to the skies. When they are almost in space, they switch to space mode. They release 10 drones to find the planes that carry the Supernukes. They find out that 20 planes are carrying 120 Supernukes. They Immediately find those 20 planes and attack. They successfully shoot down all the planes but the fighter planes are still there and they are not happy. Po’s engine is shot and he has to abort.

Buttercup shoots 3 planes down before her aileron is damaged. Chester is all thats left, he shoots 5 planes but there are still 15 planes left. He gets shot in the wings and one engine. He can’t make it back; he tells Po and Buttercup that he has to fight till he gets shot down or blown up. Chester looks at the 15 planes, and breaks out in tears. But then out of nowhere 15 missiles are shot at the planes and they go down in sequence. Chester is shocked, he checks his radar… nothing, he looks around and see’s a flying object far away, it deploys some flares and flies away. Chester is in shock, who is this strange pilot? Chester meets up with Po and Buttercup and tells them of the strange pilot.

## Chapter 6: Something Mysterious

Wednesday, May 14th, 2025. Chester says to Buttercup, “I have heard of a lost pilot back in 1967, the USAF tried to get a fighter jet in space but they lost contact with it. Do you think it could have been that plane that saved me?” “Who knows, maybe, but we shall never know.”

Po comes racing in and says, “todays our daily race day! I suggest we race in space!” Okay, says Chester. They fly up to space and use the drones to set markers. Chester notices a glistening in space; he zooms in on his camera but can’t see enough. But then it starts racing toward him. Chester tries to radio Po and Buttercup but his radio doesn’t work. He shoots flares and locks on the plane. Buttercup and Po get the signal… their not alone. But Po and Buttercup’s plane start flying toward the Earth! Their planes have been taken control of… except Chester’s. Chester hears in his radio the faint noise of morse code. ... .-.-.- --- .-.-.- ... .-.-.- / .. / .- -- / -- .- .--- --- .-. / -.. .- ...- .. ... / .-.. --- .-- / --- -. / ..-. ..- . .-.. / .- -. -.. / --- -..- -.-- --. . -.
--..-- / .--. .-.. . .- ... . / .... . .-.. .--. .-.-.- which translates to, S.O.S. I am Major Davis low on fuel and oxygen, please help. Chester doesn’t know what to do; it could be an enemy or a friend. He sets missiles to arm and flies towards the plane. He says to the plane, “Friend or Foe?” The reply is, ..-. .-. .. . -. -.. which is Friend.

Po and Buttercup are whirling towards Earth at mach 10! They have no control of their aircraft and are panic stricken. Buttercup Gs out and Po tries to regain control. Suddenly the plane starts pointing up again and regains level flight. The planes fly to Sanfransokyo, change into cars, and park them at their houses. The car kicks them out and locks itself. Buttercup and Po Immediately race to the governor and ask if they can put space missiles on arm and find the UFO. They search on their radar but can’t find anything. Chester is absolutely alone with the UFO.

Chester asks, “are you the plane that shot those aliens?” This time the response is a weak yes. Chester asks, “are you the lost pilot from 1967?” Another weak yes went through. Chester realizes that it’s the lost pilot; he

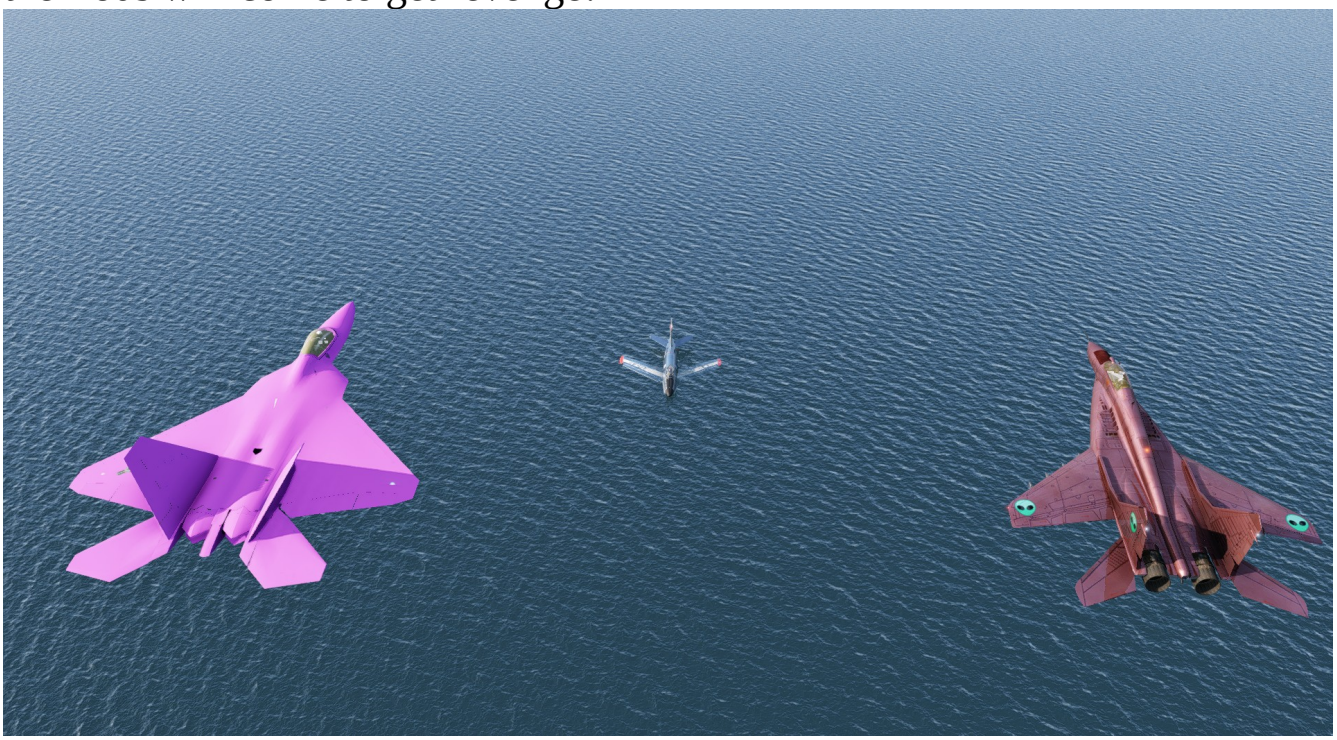

turns on afterburners and races towards him. Chester asks him, “are you hurt, is anything broken on your plane?” A faint, “radar is broken” came through. Chester finds that 4 planes are tailing Major Davis, and they just fired a missile at him. Chester Immediately says, “Bandits! 6 o’clock! Missile Inbound!” But Davis can’t do anything, he has no flares or enough fuel for afterburners. Chester gets to Davis just in time to shoot flares and fire missiles at the enemy. 2 missiles land but 2 enemys are still inbound. Chester tells Davis to make it to Earth, he will protect him. Davis has barely enough fuel to make it, but not enough to land. Chester is in a 1v2, swerving up, down, left, and right. Davis makes it into earth and has to land in the sea. Chester shoots down one of the planes and captures the other one.

After Chester shoots that last plane down, Po and Buttercup regain control of their supercars. They hear a radio message from Chester telling them where Davis is and that he captured a pilot. Po and Buttercup get into their

planes and fly to Major Davis. They find him, pick him up, and take him back to Chester’s home. Chester makes it back and interrogates the captured pilot. The pilot tells them that he is from a different planet that has

supertechnology; he tells them that his kind is called Zods, he tells them that the Zods will come to get revenge!

Chester returns Major Davis to NASA/USAF and gets the Medal of Bravery.

## Chapter 7: Battle of the Superjets

Wednesday, May 21st, 2025. Chester and Po take the Zod aircraft to their laboratory and do tests on it. They do tests to see how the aircraft works and how they can use it to upgrade their own jets. Buttercup is at their radar station upgrading the range and accuracy. She puts drones in space and see how far the radar see's it. Buttercup manages to see the drone 1 light-year away. Chester and Po manage to figure out how the Zochnology works. They put it on Chester's plane first, but the engines flame out. They do more tests and put it on Po's plane, this ends out in the landing gear malfunctioning. Po and Chester did over 300 tests on the Zod zlane. Buttercup continues on radar tests and makes missiles capable of making it 2 light-years into space. Po and Chester finally get permission from Buttercup (after many wallop threats) to test her aircraft. The first test makes the radar and weapon system stop working. But the third test works! Chester and Po continue testing their aircraft but none of them worked.

Chester got a call from the USAF saying they want to give him an F-35 Lightning. Chester and Po then do tests on it and for some reason it works. So Buttercup takes the SuperRaptor and Chester takes the SuperEagle. Po, because he came from space, upgraded his plane. So for the next few days Chester, Buttercup, and Po practice flying these upgraded jets. There are a few things that got upgraded. The radar, the guns, the missiles, the engine, the turn rate, autopilot, and stealth. All these will help Chester, Buttercup, and Po in their fight of Superjets.

One day, Buttercup notices that there are one thousand enemy fighters incoming 2 light-years away. Buttercup calls for Chester and Po and they discuss the situation. Buttercup fires 20 missiles at the aircrafts and they all hit them. Chester says fire 100! They all hit the aircrafts too. She fires all the missiles they have and there are still 500 left! So they hop into SuperRaptor, SuperEagle, and SuperFulcrum take to the skies. They reach space, turn on afterburners, and engage the enemy. Buttercup fires 16 missiles and shoots down 18 enemy fighters. Po fires 19 missiles and shoots down 20 enemy fighters. Chester fires 22 missiles and they all hit their target. Chester doesn't waste his gun ammo in case fighters attack him or Po and Buttercup. There are still 400 enemys left; but what they don't know is that Buttercup's plane is equipped with a supernuke. She fires it in the middle of the enemy and it destroys 350 planes! Strangly though, an aftershock of the bomb damages Po and Chester's planes, but not Buttercup's. Chester and Po are forced to leave Buttercup. Buttercup is in despair, she has no weapons; tears start forming.

Until she looks at her armament and see's she has one last supernuke. She is way to close to the enemy to fire it but she has to… BOOM! Her aircraft suffurs severe damage to the engine. She slowly makes her way back to Earth. With one engine out she carefully lands on Maxwell Air-force Base and gets the Medal of Honor and Bravery.

Buttercup, while making her way to Maxwell, gets a radio call, it says, "This isn't the end, we shall get you! You can't keep them forever!" Buttercup discusses this with Chester and Po and they do some more tests and more configurations.

## Chapter 8: Mission Impossible

Date Saturday, May 31st, 2025. Po and Chester are doing some testing on their planes. They make an anti-steal mechanisms for the planes and automatic escape procedures for them. They also make stealth upgrades for them; the planes can turn invisible either on radar or sight. Buttercup is keeping watch for the Zods. Chester, Buttercup, and Po decided that the world is not ready for the Zochnology; so they decide to only use the Zochnology in demanding cases or in space. Chester and Po also add an auto-fix setting to their planes. In case the planes are captured, Chester and Po made high tech shields for the planes.

Chester, Buttercup, and Po get assigned a mission by the USAF; they are to attack the most advanced millitary base of all time. Ream Naval Base, Cambodia, China. This is no light task, but the USAF have declared Chester, Buttercup and Po more elite than the Navy Seals. Just before Chester, Buttercup, and Po leave, they create a team name… The Stealth Birds. They drive onto the aircraft carrier and are carried to the enemy base. They get informed on the mission and take off. Little does the US Navy officer knows that the three pilots that just took off have alien technology. Chester tells the gang that they are allowed to use the Zochnology missiles and bombs but make it look like it took us a while; we don't want to raise suspicion. They make it to the navy base but before they even see it they are bombarded with AAA fire. They all take evasive maneuvers and dodge the shells. Chester tells them to drop the bombs ASAP! The base goes up in a giant mushroom cloud, but The Stealth Birds are still flying. The navy officer see's the mushroom cloud and thinks the worst. Immediately 20 Chengdu J-36s are dispatched. Chester see's the 20 enemy aircraft coming and tells the gang to break off. Po and Buttercup think this fight will be easy, but Chester is on his guard. While the enemy aircraft are still beyond normal long range missile range, they fire 2 unknown missiles. They barely miss Buttercup and Po. Chester tells them to act like they have the same tech. Chester fires 3 of his AIM-200 Long Range Nuclear Missiles. It hits the targets and destroys 5 planes. The enemy planes fire 2 unknown missile. Right when the missile is near Po's plane it

explodes into a small mushroom cloud. The navy officer see's all this and is getting curious.

Now Chester and the others are shocked. How did the Chinese planes get nuclear missiles? Chester thinks fast and says, "Don't destroy too many planes, capture 3 and we'll do tests on them." So the gang turns on full Zochnology mode and destroy 12 planes and capture 3. When they return to the carrier they are bombarded with questions by the navy officer. Chester and Po tell him about the Zochnology and everything. They told him that they thought it wasn't safe for the world to know this kind of tech yet. The navy officer tells them how much the US military would advance if they had that kind of tech. But Chester tells him what would happen if the entire world had it. The navy officer agrees and takes them home.

Chester and Po take the Chinese planes to their lab and Buttercup carefully watches China's every move. What Chester and Po find out is shocking. The J-36s were packed full of Zochnology. And whats worse, Buttercup says that there were no Zochnology planes that were in China. The only thing that could have happened were a spy or cyber hacking. Buttercup searches all over their electronics and Po and Chester search the area from top to bottom and every nook and cranny. Buttercup confirms that there were no cyber breaches, but Chester and Po find out that 2 spies have been lurking around the area. Now, Chester, Buttercup, and Po upgrade outside security. Level one: Shield. Level two: Laser Fence. Level Three: Lava Wall. Level Four: Electric Building. Level Five: Cameras. Level Six: Zochnology Guns. This should prevent any spies from getting into the area.

The USAF needs Chester and his gang's help. The Chinese military is now using the Zochnology against the US military and they can't do anything. They need The Stealth Bird's help. Chester, Buttercup, and Po race to the White House and President Donald Duck tells them that military bases all over the US are getting attacked. Chester, Po, and Buttercup are stationed all over the US, covering equal spaces. Over the span of 1 hour 50 planes attacked The Stealth Birds. And they kept on coming! Chester told the team and the president that they are going to China to destroy all the Zochnology planes there are. The Stealth Birds reach China and find out by radar that there are 500 Zochnology J-36s. Chester, Buttercup, and Po each take different places in China. This

task took an entire day! When Chester and the gang are done; they start making for home. But behind them is a ginormous plane coming. The size is off the charts. Chester see's it on the radar and tells the gang to prepare for a fight. When they turn around and see's the massive plane incoming.

This plane shoots giant gun shells at The Stealth Birds and they are scrambling for cover. Chester says they will all shoot a nuclear missile at it. They each fire one nuclear missile… but it doesn't do a scratch. Chester is in complete shock. He tells Po and Buttercup to fly behind it and set another Nuclear missile on arm. Chester distracts the giant plane putting the fire on him while Buttercup and Po get behind it. When Buttercup and Po are behind the plane, Chester says he will fire on the cockpit and they will fire on the engines. They fire and… it does nothing! Chester flies near the plane and puts it on autopilot. He then jumps on the plane and finds a way in. While Buttercup and Po are bombarding it with guns and canons; Chester is looking for a way to shut it off. He finds the cockpit and see's it's on autopilot… right for the White House! It's armament is hundreds of bombs. Chester tries so hard to turn it off, redirect it, release the payload, or reach the engine room. He goes outside and gets back in his aircraft. He tells Buttercup and Po to release the full payload, drop tanks and all. They all release it at the same time, Chester releases his on the cockpit, Buttercup releases hers on the bomb bay, and Po releases his on the engines. This explosion makes an enormous mushroom cloud that reaches space! The plane is still unfazed by it. Chester has one more trick up his sleeve. He tells Buttercup and Po to get back home ASAP and fire all their ground nuclear missiles at it… the full payload! While Buttercup and Po race home at mach

15! Chester is trying to hack into the plane’s system. He manages to hack into the pitch system and makes it fly into space. He informs Buttercup and Po that the explosion of the missiles will not harm earth. Buttercup and Po make it back home and fire 200 ground nuclear missiles at it! The explosion finaly destroys the plane. But it damaged Chester’s plane too and he lost control of it.

Buttercup and Po are now racing back at mach 20! Chester keeps falling and doesn’t regain control. Buttercup see’s Chester on her radar falling quickly. 15,000 feet, 10,000 feet, 5,000 feet, 3,000 feet! Buttercup is in despair, she starts crying, shes not going to make it. 1,000 feet, 500 feet, 100 feet… then the dot goes away. Buttercup is crying and Po is sadened. He looks for an explosion or remains but can’t find anything. Actually, they don’t find anything leading to the crash. Never the less though Chester is gone.

## Chapter 9: A Remarkable discovery

Chester wakes up in a strange environment. He is still in his plane but he isn’t on earth anymore. A strange creature approaches him. Chester gets out and looks at him. Its a Zod. The Zod greets him in Chester’s language. The Zod tells him that every Zochnology plane will teleport itself when it crash lands to wherever it’s setting is. Your plane teleported to our planet. Chester is in shock, he thought this was a dream. This Zod told him that one in every 100 Zods are born friendly… he was one of those Zods. He told him that his plane was fixed and that he will let him go. Chester really thinks he is in a dream or afterlife now. He gets into his plane, turns stealth on, and flies out of there. Chester pulls up his navigation map and calculates the time to get home. Its a 48 hour flight! Back on earth, Buttercup locked herself in her room and won’t talk to Po. Po feels so bad, he feels like he should have stayed with Chester. But he knows he would have gone down with him. Po can’t do anything to cheer Buttercup up. He then gets a radio call. It says, “Strike Eagle calling home, Strike Eagle calling home, the bird is coming home, I repeat, the bird is coming home.” Po can’t believe it, it’s Chester! Po tells Buttercup but she thinks it’s a prank. Po gets on the radar and see’s Chester. He is 10 light-years away.

Chester passes by tons of interesting planets. He also comes across aliens, some friendly and some not. But none of them bothered to attack him because they knew he had Zod Zochnology. Po is desperately trying to tell Buttercup that it isn't a prank and its the real thing. She still doesn't believe. Po keeps watch in case something happens. Po is so anxious to see Chester. But disaster strikes, Po went into Buttercup's room and she was gone. So was her plane too. Po immediately jumps into his plane and races to find Buttercup. Po finds Buttercup and tries to contact her. She doesn't reply, and she turns on afterburners and takes off. Po hacks into her intercom and hears her say, "I can't stand it, its too much for me, why did that have to happen." In the saddest tone ever. Po calls Chester and tells him he needs him immediately. Buttercup does something not even Chester did when he was falling… she turned her plane to overdrive mode. Po and Chester did not know how to disable it, but they did know that it overpowers everything on the plane and makes it highly unstable. Po cannot believe it. In a flash her plane goes from his vision. At mach 50 nothing really looks right. Po turns his overdrive mode on and races after her. He drops his payload and opens his hook bay. He gets really close to her, locks on, and fires.

This hook he fired is a soft mesh that takes the shape of the aircraft. Now Po starts turning around and pulls. His plane lights up with warning, structural warnings, engine warnings, fuselage warnings, but Po doesn't give up. Po gets onto Chester and asks his ETA, Chester says, "2 hours." Po is on his own. Buttercup is demanding he lets go, she says she doesn't want to live a sorrowful life. Po keeps on telling her that Chester is alive, but the more he

says the more Buttercup is disbelief. Chester is overhearing everything but he can’t hack into Buttercup’s intercom. He is going mach 20, he turns overdrive mode on. The ETA changed from 2 hours to 20 minutes. Po’s plane will tear up if he keeps pulling. Po gets his 20 drones to get foam and cover his plane with it. He shoots Buttercup’s engines out and they fall out of the sky. The foam protects the planes from getting damaged. The foam goes away and Po races towards Buttercup. He is mad but happy too, he is glad they didn’t die. Po orders Buttercup to come back home and he makes sure she doesn’t do anything silly again. Chester makes it back without harm. Buttercup is shocked off the charts. Po is glad. Buttercup says sorry and all is well. But I think there is one thing they forgot, or did they?

## Chapter 10: The Return

Thursday, June 1st, 2025. Chester is safely back home. He tells Buttercup and Po about what happened and then set their planes to return to their home, not the Zod planet. They create an automatic re-arm system and launch mechanism to get into space. China has admitted defeat to The Stealth Birds and peace between the US and China. One day Buttercup glances at the long range radar and there are 1,000 dots on it! She calls for Chester and Po and she identifies them as Zod planes. She recognizes this, the mysterious radio call. They are coming for revenge. Chester and Po create an automatic defense system for earth. If anybody needs someone or an invasion happens, they can dispatch Zochnology drones anywhere in the world. Buttercup makes it where she can release ground missiles from her plane. The Stealth Birds now feel prepared for the fight. This time the Zods are attacking the Stealth Birds, not the earth. So Buttercup, Po, and Chester make their way into space. Both sides are ready, Chester and Po destroy 400 planes and Buttercup destroys 300. The remaining 300 planes split up into three flights of 100. Chester, Po, and Buttercup go after each one. Buttercup destroys all of her and so does Po. Chester destroys 99 but one is still standing. That last one starts retreating. The Stealth Birds think its a victory… but all of a sudden their planes start heading towards earth. Chester, Buttercup, and Po have lost control of their aircraft. Once they get into earth’s atmosphere, the plane tilt upside down and ejected all of them. They saw that their planes

started to head back into space. Their parachutes open and they slowly fall back to earth.

Buttercup says she might be able to get control of their aircraft again if they get to their base in time. Once they get on the ground Chester finds out that its a 1 hour walk to Sanfransokyo. When they get back Buttercup tries to find their planes. She finds hers and manages to take back control, but the rest of theirs she couldn't find. Her radar isn't strong enough. She gets her plane back and they try to upgrade the radar. But it was too late. She couldn't find them. Chester now knows why Buttercup and Po lost control of their aircraft before. The Zods were able to take control of their aircraft. Chester and Po configure Buttercup's plane to take control of other aircraft and upgrade it's cyberhacking defenses. Buttercup now starts flying towards the Zod planet. Chester and Po keep on upgrading the radar and Buttercup is looking for the lost planes. Chester manages to find his plane and bring it back but can't find Po's. Buttercup's plane lights up with targeting warnings. But she has visuals on Po's aircraft. She locks onto it and sends it home. But the Zods are firing a ridiculous amount of missiles at her. She fires flares and chaffs, avoids most of the missiles but some damages her shields. She wants to make sure the Zods won't attack them for a while. She releases her full payload of the strongest nuclear missiles she has on them. The Zod planet looks like a fireball after the strike. Buttercup's plane is damaged in the explosion, she is leaking fuel and lost one of her engines. With the fuel leak she will not make it back home. She calls Chester and Po and informs them on the situation. Chester suggests she turns on afterburners and goes until she runs out off fuel. Buttercup says she doesn't have enough oxygen for that. Po has a suggestion, what about getting Chester's plane to pull you? Buttercup says her radar was damaged. Chester suggests putting her into hypersleep and they

will come and get her. Buttercup thinks that will work. On normal status the oxygen will last 24 hours. But if she is in hypersleep it will last 80 hours. Chester hacks into his plane and hooks it onto Buttercup's. While his plane is pulling Buttercup's, Po will fly back out and then pull her the rest of the way. The only downside is that its a 48 hour journey there. So it's a 96 hour there and back. Chester makes an oxygen upgrade and transfer system for Po's plane and he goes to find Buttercup.

It's been 48 hours and Po finds Buttercup. Chester releases Buttercup and Po transfers some of his oxygen. He then attaches a line to Buttercup's plane and makes for home. Chester keeps his plane close. He then gets multiple missile warnings! The Zods had a last resort. Chester faces the missiles and fires flares. He also manages to lock onto the missiles and fire guns at them. One of them hits Po's left engine. If he keeps on trying to pull Buttercup it will stress out his one engine. But Chester comes and attaches his plane to Buttercup's too. Together they pull Buttercup back to earth.

# Chapter 11: Upgrades

Monday, June 6th, 2025. Buttercup and Po are back home safely. Chester and Po each create specific attributes to their planes. Chester's plane has a thrust of 100,000 pounds! Buttercup's plane has a radar range of 100 light-years and can hack planes. Po's plane has a structural integrity of 10,000 per part. These are specific attributes that each pilot has shown worthy of getting. Chester, in pulling Buttercup through space. Buttercup, in getting their planes back. And Po, in pulling Buttercup back, in space and on earth.

NASA has asked The Stealth Birds to put a base on the moon. Chester, Buttercup, and Po immediately agree. They each take a capsule and put it on the moon. They get out and open the capsules, they repeat this process for a while until they start taking astronauts up there. NASA also asks them to make defenses for it. Chester and Po work on the guns, missiles, and ground defenses, while Buttercup is making radars. Buttercup also makes a shield generator that's around the moon. While Chester, Buttercup, and Po are making some finishing touches a cave opens up. They all take a look in the cave and then they slip into a crevice fall a few feet. They then realize they can breathe without the suit. They are shocked at this point. Then this strange colored air breathes into them and they feel different. They are at this point scared, they put their suits back on and race to the surface. They finish the last bits of safety and leave for home.

When they get home they each do physical scans on them. But they don't notice anything weird. Chester says he is going to drive to the doctors and see if they can't figure this out. When the opens the door it gets sent 100 miles away. Chester is in shock, Po is curious. Buttercup for some reason can see through her vision a radar that is tracking that door. Po stepped on a nail from the door and it didn't hurt him. Chester tests his strength by lifting his Strike Eagle and throwing it up. He threw it all the way up to the Karman Line and caught it. Buttercup was able to see all things on her inside radar and she was able to take control of her plane outside of it and fly it. Po was able to hold onto the engines with afterburners on and survive a 40,000 foot drop. All of their powers are linked to their plane's attributes.

The US Army needs The Stealth Birds for a technology retrieval from an enemy base. This time the Stealth Birds don't go in with their aircraft. Instead they upgrade their cars. Each car has guns, shields, and reinforced armor. The

base they are infiltrating is Krasnodor Military District, Southern Russia. They shall get as close as they can with stealth on, then they will break into the vault and get out of there.

They reach the base and break in, they don’t realize that the cameras have heat sensors. 10 forces are coming towards The Stealth Birds. The break into the vault with Chester’s strength, Po walks straight through the lasers, and Buttercup locks all the ways into the area. When they get out of there the commanding officer is in shock. How did they complete the task without weapons or tools? He never will know. The technology they retrieved was a secret to infinite oxygen. They gave it to NASA and they shared it with The Stealth Birds. Now the Stealth Birds can survive in space without a suit, and their planes will never run out of oxygen.

NASA now wants bases on every planet. Chester puts one on Mars, Buttercup puts one on Uranus, and Po puts one on Neptune. They also put up defenses and transport devises. NASA awards The Stealth Birds with a quintillion dollars, and access to all the military, NASA, the CIA, and the FBI. Chester and the gang agrees that they shouldn’t do anymore for NASA

or the military in the tech sense. NASA and the military agree with them and for now on they are only on missions.

## Chapter 12: Greed

Date 2025-06-09. The Stealth Birds are pumped about their new powers. But Russia, China, and North Korea all find out about the Stealth Birds helping the US and NASA. They want to know the secrets they hold. They all send fighter jets to attack the Stealth Birds. But the Stealth Birds take them out in seconds. Chester knew this day was coming, when foreign forces would start wanting their power. Chester tells the gang that they cannot destroy any of the aircraft. They will use their powers to repel the enemy not kill them. The attacks keep coming and the Stealth Birds keep repelling them. By depleting their armament. Chester and Po make a weapon that demagnetizes the enemy's armament. This makes the weapons fall off. Chester puts it on each of the aircraft and cars. For quite a while they repel the attacks until they stop. North Korea, Russia, and China decided to join forces and build a superweapon. In 3 days Buttercup see's a large object incoming. It's the new superweapon. Chester, Buttercup, and Po jump into their jets and race to intercept it. This superweapon is already firing missiles. And They're proximity missiles.

One of them explodes right near Chester and splinters his right wing a bit. The next missile is a nuclear one and it explodes a bit behind them. But it

doesn’t do a scratch. Since the armament are in bays the new demagnetize weapon won’t do anything. Po takes the lead to draw any fire away, Chester tries pushing the plane away, and Buttercup is trying to hack into the system. Chester can’t push it and Po’s structural integrity is failing. But Buttercup managed to hack into the plane’s system and steer it away. She ejected the pilots and crashed the plane in the desert. Chester calls Kim Dumpling Un, Vladimir Shutin, and Xi Powping to tell them that if they dare to attack them again, they won’t be as merciful. As a warning, Chester shoots a flare missile that spells, Don’t Do It Again! At Zhonghanhai, Kremlin, and the Kumsusan Palace.

## Chapter 13: A Eventful Journey

Date 2025-06-10. Chester, Buttercup, and Po need a vacation. They set the defenses to arm and decide to find some interesting planets to explore. They first decide to see if the planet K2-18B can sustain life. It is 38 light-years away, but that’s no problem for them. They reach the planet and notice that there are some green parts and blue parts. They land and they see trees everywhere and strange animals. They do tests on the water and they see it’s true water. They stay here for a bit and deploy a home/research center. They go to Kepler-16F. They find out that there are trees there, but the water is not true water. They test it and the trees. They put a home/research center on it too. The go about 1000 light-years into space. They visited about 2000 planets in 1 week. K3-16B is a life sustaining planet they discovered. It only hold animals not alien humans. They stay on that planet for a bit longer, looking for how the animals are staying alive. They then fly for 1 light-year and find a strange planet. From space they can see that the color is metallic. They start flying closer and closer until they get pulled down to the planet. They have completely lost control and warnings starts flashing. They get closer and closer until Chester tells everybody to engage the foam protection system. They engage it and they continue falling until they crash onto the planet. The plane’s magnetic panels are going haywire and they won’t start up. They get out of the planes and try to open the storage compartment. Only Chester with his strength was able to open it. He pulls out a compass and it’s pointer is going wack-a-bird. Chester says that their on a magnetic planet.

The core or something big on the planet is magnetizing all the metal. They must find that magnet and disable it.

Chester gives everyone a gun, supply pack, and a water canteen. Since the magnets will make all of their tools wacky, they are forced to look for it without GPS. Chester and Po first try to find out if they can make all of the metal in their planes demagnetized… they can't. They walk for 100 miles over 2 days and still can't find the source. They decide to walk wherever the compass takes them. They walk for a while until the compass keeps going back and forth. The magnet is in the core of the planet. Po is unhappy, "This would be much easier if we had our cars!" Chester tells them he'll see how far underground he can go. He goes about 100 miles until the heat gets to him. Po then gets his digging tools and starts heading further down. Until he reaches the core. Po comes back up and says he found it. But it's massive! Chester says he'll go back to the planes and see how much TNT they've got. In the meantime Buttercup and Po are trying to heat it up, or drop a weight on it. They don't have something heavy enough or hot enough to do those things. Chester comes back with 200 pounds of TNT! "If 'this doesn't do it I don't know what will!" Chester sets the fuse and drops it into the hole. BOOOOOM!!! The core has demagnetized and the compasses and tools are working again. Buttercup calls for the planes and the take off. They take a few moments to scan the planet but find nothing. They set off for a new planet.

They reach a very green planet and they enter it's atmosphere. They take some readings and it's a planet full of poison air! The poison levels were off the charts on this planet. One tiny breath of it's air could kill you in 3 minutes! They see that it's about a quarter of a light-year away from earth.

Chester says that it’s not safe for anyone to find this planet. They must destroy it. This poison can be used as a bomb or assassination. Chester has only 100 pounds of TNT left. And the poison would kill them, even with suits on. If they fly into it with afterburners on it would ignite the entire planet. Chester gives TNT to Buttercup and Po. They each spread it around the planet. They race out of the atmosphere turn around and… BOOM! The planet goes up in a fireball.

NASA finds out about the explosion of the planet and are not happy. Chester, Buttercup, and Po return home and are immediately reported to the Pentagon! Pete Hogseth asks them why they destroyed that planet? Chester responds with, “If anyone were to find that planet either hundreds of people will die trying to establish a base there, or some country manages to have private access to an enormous supply of poison. Pete asks, “Was that yours to decide?” Chester says, “Does anybody own space? No, nobody owns space, so I had all the right to blow up that planet!” Pete and NASA say, “Okay, but you guys are grounded from going into deep space for a year. And then you’ll have to get permission by us before blowing anymore planets up.” Chester agrees and they are grounded for the next 365 days.

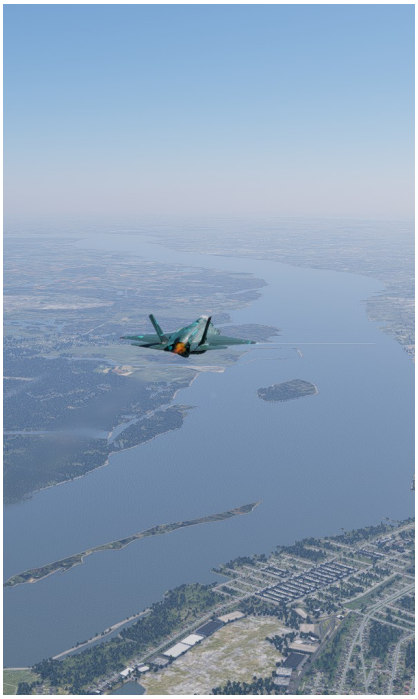

# Chapter 14: Things Start Going South

Date 2025-06-20. Chester, Buttercup, and Po are living life on earth without space. They go on a few missions and Adventures. Not very exciting ones. Until one day, the Pentagon leader, Pete Hogseth, suddenly disappeared. Then the NASA leaders disappeared. Until all major leaders in the US just went missing! No one know why. There were no traces of disappearance or assassinations. Chester, Buttercup, and Po got news of this and immediately start searching. Chester searches in the east, Buttercup searches in the west, and Po searches in the middle. Each one searches high and low, underground and in every house. Nobody found anything. Buttercup then went to Hawaii, while Po and Chester went to Alaska. They didn't find anything there.

Chester goes to Russia, North Korea, and China, Po goes to England and the Middle East, and Buttercup goes to Canada, South America, and Africa. Po doesn't notice anything strange. Neither does Buttercup. But Chester finds some strange things in the East. North Korea, China, and Russia have quadrupled in security and prisons. They each have so much security. Half the population of each country are in the military around each prison. Buttercup checks the radar and see's that there have been multiple Zods in the US and the East countries. Especially on the day of the US leader's

disappearance. Buttercup thinks that the communist countries have joined forces with the Zods to eliminate the US! Chester doesn't know why the they would team with the Zods; because they are not trustworthy creatures. Chester tells Buttercup to arm all of the Zochnology drones and send them to the Zod planet. This time all the drones have Zochnology nukes. Chester has see to the end of the Zods. While the drones are making their way to the Zod planet, Chester and Po go overdrive stealth mode. They are going to find each of the leaders and rescue them. They manage to rescue 70 percent of the leaders. But the rest of them are in the most secure prisons. Buttercup joins in the rescue and they look for the last 30 percent of leaders. Buttercup goes to China, Po goes to North Korea, and Chester goes to Russia. Po and Chester rescue them but Buttercup can't get into it. She can't use her radar, she can't blow the thing up, and she can't just waltz in. She calls for Po and Chester and they discuss the situation. Chester suggests that he and Po create a distraction so Buttercup can break into the prison.

They all agree with this plan. Chester and Po pretend like their trying to break in by the main entrance. But on the prison wall where the main cells are, Buttercup is blowing the wall up. Buttercup is able to rescue 50 percent of the leaders in the prison. But the guards realize that it's just a distraction. Chester and Po are attacking the main gate; they are met by men and Zods. The Zods take the remaining prisoners and take them into space in their planes. Buttercup races after them, since they are grounded from going into deep space she has to rescue the leaders before the Zods get into deep space. Buttercup tries to disable the engines, she then gets close and cuts the where the prisoners are and the cockpit is. She caches the leaders and goes back into earth.

Chester, Buttercup, and Po return all the leaders to their places. The Stealth Birds get the medals of Bravery and Honor. And their space grounding is done away with. But what happened to the drones, and this question comes up… will the Stealth Birds get tired of this and will they bring new members in?

## Chapter 15: New Folks

Date 2025-07-01. Chester, Buttercup, and Po are liking this sort of thing. But once they retire, (the animals never age) they need some other animals to replace their roles in the Stealth Birds.  They come across multiple animals but none of them seem worthy. Buttercup is seeing if they can make specific powers like how they got theirs on the moon. Buttercup couldn't make one, and Po and Chester couldn't find anyone worthy of their roles. They come across an admirer. His name is Peter and he is a rabbit. He has loved how the Stealth Birds got through all their missions, and their powers. He has made models of their planes and created drone versions. They ask him if they could do some tests on him. He accepts and the testing begins. They find out that he is a very ongoing person, he doesn't give up, and would risk everything to save someone. He is also a person who is very athletic, agile, and flexible. Chester, Buttercup, and Po decide this can the first replacement. Peter is honored to be one of three replacements. Since he was the first one he is selected as leader. He gets his very own transformable fighter plane. It is designed after the F-86 Sabre. It is upgraded to have a top speed of mach 100 (since it has Zochnology), a turn rate of 180 degrees per second, and it also can be a ground attack or air combat aircraft. These are alike to Peter's three attributes, athleticism, agility, and flexibility. While Peter starts pilot training with Buttercup at the base, Chester and Po take trips to different countries.

Chester goes to his home country the United Kingdom, and Po goes to his home country China. Po finds a red panda named Shifu. He shows tons of powerful Kung Fu moves and knowledge to Po. He is also very respectful and shows excellence and perseverance. Po brings him back and gives him the AV-8B Harrier. This plane is upgraded so that it can flip around and turn around side ways. The structural integrity of it is also made impenetrable. Making it the perfect plane for Shifu to hit an enemy with it.

Chester is looking for a perfect animal to take the last place of the gang. He stumbles across a fox den. This fox den holds a fox named Fink. Chester see's what attributes he holds. He shows that he can build things out of anything really quickly. He was able to take sticks and mud to make a model house and jet. He was able to make a glider too. He shows respect, excellence, perseverance, and integrity. Chester decide he can be the last replacement. His transformable fighter jet is the Po's old MIG-29. It was upgraded to have unlimited resources, and a system to build anything Fink want.

Now that all the replacements have been selected, Chester, Buttercup, and Po train each one in aviation, mechanics, IT, and scouting. These three have done almost everything they

need to do to complete their training, the only thing they have left to do is complete a mission the USAF assign them. The army wants the Stealth Birds to go and take pictures of North Korean bases. What the army doesn't realize is that instead of Chester, Buttercup, and Po, it's Peter, Shifu, and Fink. They go to the army base and when they take off the army is wondering why it's different aircraft. Peter, Shifu, and Fink each go to different places in North Korea. They climb to 70,000 feet and start a course for each of the bases. They go undetected until they make their way back, they descend to 40,000 feet and make for home. Little do they realize that the enemy was able to see them now at 40,000 feet. They release several Su-25s. Peter, Shifu, and Fink each take evasive maneuvers and turn to face the enemy.

The thing Peter, Shifu, and Fink don't know about these Su-25s is that they have Zochnology! Turns out the Stealth Birds didn't destroy all the Zochnology planes the communists had. Peter tells the others to be on their

guard. Peter tells them that he will speed ahead and draw enemy fire away, Shifu will hit the enemy planes down towards the ground, and Fink will build a catch system. Peter speeds ahead and draws all the enemy planes toward him. He makes sharp turns and goes at high speeds. Shifu comes behind and uses the Harrier's flip ability to hit the enemy planes downward. Fink on the ground is building a foam mesh to catch all the planes. When all the Su-25s are in the mesh, Peter forces all the pilots out and he ensures that the planes are destroyed, leaving no more Zochnology planes in enemy hands.

Peter, Shifu, and Fink make for the air-force base and they give the pictures to the commander. The commander knows it's not Chester,

Buttercup, and Po. He calls for them and Chester explains that they are the replacements for them when they retire. He tells the commander that they trained the recruits in aviation, mechanics, IT, and scouting; ensuring that they know everything for their place. The commander takes a few seconds and shakes all of their hands. “Well done Peter, Shifu, and Fink. You have destroyed 15 Su-25 Zochnology planes and have safely completed your mission. Each of you will be awarded with the Medal of Bravery for your actions, first flight, and first fight.

## Chapter 16: One Last Mission

Date, 2025-12-20. Peter, Shifu, and Fink have been on standby for the last 10 months. Chester, Buttercup, and Po have been going very well going on more than 120 missions! But this year is where all that end. On the 25th of December, we will read about the Stealth Bird’s last Mission before handing the whole thing to the Stealth Squad (Peter, Shifu, and Fink are the Stealth Squad.) Buttercup gets a mysterious radio call 5 days before Christmas. It says that the person needs help and to meet him at the coordinates, 84 degrees north, and 145 degrees west. Buttercup calls for Chester and Po, she tells them that she got a mysterious radio call from the North Pole. Chester notifies the Stealth Squad that their going on a mission and they need to be on standby. Chester, Buttercup, and Po start making for the north pole. When they reach it they find a very run down factory. They land and walk into they factory. From all the toys around they can see that it’s a toy factory… but who owns it? They walk around and someone says “who’s there?” Chester says, “the Stealth Birds. Who are you?” He says Santa Claws. Chester, Buttercup, and Po are immediately surprised, he is a white bear. Santa explains that Zods came and destroyed his toy factory and stole his Elves. He needs their help to get the Elves back and fix up his factory. Chester says he is honored to help him and they will make sure this Christmas isn’t going to fail.

Chester says that he and Po will fix up his factory while Buttercup goes to look for the captured Elves. Buttercup makes for space and turns on her super radar while Chester and Po are starting to clean up the exterior and heaters. But all the of them have one same question… where did the Zods come from? They all thought that Buttercup had destroyed their planet. They must have had another one. Buttercup gets a lock on some aircraft and they are Zod planes. Buttercup follows them from a distance and sets her magnetic pulse system on. She also sets oxygen cage missiles in case the Elves are dropped. Chester and Po are making progress. They have finished the exterior and heaters. They have cleared out all the machines and start working on them. But then Chester see's that there are tons of Zod planes coming. Chester warns Po, and Po says he'll handle this. Chester keeps on working on the toy machines while Po takes off to defend against the Zods. Buttercup is now deep into space and see the Zods fly directly toward a planet. She knows that's the planet the Zods have made a base. She takes control of the Zod aircraft, release the Elves, and fire oxygen cage missiles at each one. She then fires her whole armament of nuclear missiles at the Zod planet, ensuring that this one is fully destroyed too. She gets all the Elves and start making the 2 hour journey home. Chester and Po, on the other hand, are trying to rebuild the machines while defending off Zods. Po is using his demagnetize weapon to drop all the enemy's armament, he then captures the armament and stores them for his team's use. The Zods can't fire missiles before their demagnetized. Po is on the last Zod until it fires long range missiles. They all hit Po, damaging his engine. Even though he has a high structural integrity, this is Zochnology missiles. Po has one engine on fire and needs to land. The fight took him all the way to Greenland so he finds a base there. With one engine out and an extra 1,000 pounds of extra weapons he is

losing altitude fast. He land with a CRUMP! His hydraulics take a beating and his plane is grounded for repairs.

Chester is still fixing the machines, 3 days go by and it's done. But Santa still needs supplies to build toys. Buttercup and Po each go to different supply warehouses. Chester goes to a North Pole one and Buttercup goes to a South Pole one. When Chester gets all the supplies it adds 2,000 pounds of weight to it. His ETA will be 3 hours. But Buttercup has an extra 2,300 pounds of weight. Her ETA is 2 days. Will she get back before the eve of Christmas? Chester makes it back and they can start working on 40 percent of the toys, but the rest of them need the supplies Buttercup holds. Buttercup will get to the factory 6 hours before midnight. Chester asks Santa if that will be enough? Santa says, "I have 500 Elves, it will be just barely enough. But I might not get around the world in time." Chester says he will make an upgraded sleigh with Zochnology so he can get around much faster. Santa is overwhelmed. Chester makes an upgraded sleigh, it has secret weapons in it in case the Zods attack him again. Chester also makes security around his factory also. Buttercup gets back 6 hours before midnight and they finish the last bunch of toys.

Santa asks if they want to help him deliver them? The Stealth Birds immediately say YES! Chester, Buttercup, Po, and Santa each take a bag of toys and deliver them all across the world. Po goes to Russia, China, and Korea, Chester goes to the Middle East. Buttercup goes to North and South America. And Santa goes to Africa, Japan, Iceland, and Greenland. By the morning of Christmas day, every animal wakes up to a present, nobody is left without a gift. Santa asks how can he repay them? Chester replies with, "if you wanted to you could give us some candy and general food like dry rice, cereal, dry foods, frozen foods and things like that. We are retiring so we will be going to England to live." Santa says, "you shall have what you asked for. I shall also give you a luxury house I have in England, I want you to have it." Chester and the team are shocked, they are going to live in a luxury house in England! The Stealth Birds go and check out their new home. Its a quartz two story house with a basement, it doesn't have too few windows. It has a three car space garage and a 2 acre backyard. The floor is bamboo and it has white wood cabinets with marble countertops. It has a microwave, oven, kitchen table, and 16Quart airfryer. The first floor also contains a dining room and a living room with a Wii, Playstation 5, X-Box series X and S, three desktop

computers, and a Blueray player. The second floor has three bedrooms with kingsize beds and bathroom, with closets. It also holds a radar control. The basement is a gameroom, it has a pool table, pingpong table, a foosball table, air hockey table, and a driving, flying, and fighter combat simulators. It also has a 5,000 foot runway not on maps. Chester and the team are blown. This is the literal dream house.

## Chapter 16: The Stealth Bird's Finale

Date 2026-01-01. The Stealth Birds call for the Stealth Squad to meet up at Sanfransokyo. When they all get back at the base, Chester tells them that their time is up and they need to take their place. They set new ID for Peter, Shifu, and Fink, set fingerprint and face recognition, and other stuff. They move all their stuff into their new home and then, they say good bye. They shake hands, hug… but then. BOOOM!! A jet shoots through the sky at intense speeds. Making a sonic boom that destroys the tops of the skyscrapers. The Stealth Birds and Squad are shocked, they didn't think people would have a fast enough jet to make that sort of sonic boom. Buttercup Immediately tracks the jet and finds out there are 9 more! All of them hop into their jets and race to the skies. Since they all of the planes have upgrades, they use them to safely destroy the planes, not the pilots. Fink builds an automatic catch, eject, and destroy system on the ground. Po and Shifu draw the planes on them since Po and Shifu have infinite durability they can take all the hits. Chester and Peter shoot all the enemy plane's engines out. Then Buttercup directs them into Fink's mechanism. One plane gets away and Peter chases after it. The rest of the crew take all the pilots for questioning. They tell them that they're North Korean pilots, the government had created a new jet that can use a sonic boom to destroy buildings. The team has thought the worst.

Meanwhile Peter is still chasing the lonely fighter, he gets word that it's a North Korean fighter jet and it's capable of using sonic

booms as a weapon. Peter demagnetizes it’s armament and tells him to stand down. He doesn’t. Peter fires at it’s engines and captures the pilot. Peter suggests that they build a counter weapon for the US. Chester agrees and they ask the Pentagon if they can build a weapon to counter the North Korean sonic boom fighters. They accept and they start work on the project. They spend weeks building a countermeasure. And they come up with a sound shock waver. It can be put on the ground or on a plane. It uses power full sound waves to disrupt the sonic boom cone. There is a system in it that searches for sonic booms and automatically or manually shoots sound at it. They test it with some high speed drones and it works like a charm.

The Pentagon pays 1 billion dollars for 1,000 of these weapons. The Stealth Birds give this money to the Stealth Squad since they need it more than they do. They finish the last weapon and give it to the Pentagon. Chester, Buttercup, and Po now say a final goodbye. Peter, Shifu, and Fink are exited for this role. They say goodbye and the Stealth Birds fly toward their new home. The Stealth Squad walks into their new base dramatically. This is their new job. From an admirer to fighter pilot, from a fox den to a forever honorable home and job, and from a life of martial arts to a life of saving. The Stealth Squad is now the new Stealth Birds.

Preview: Date 2026-01-07. 6 days after the Stealth Birds left. Peter suggests they see what flying in space is like. So they turn on the automatic defense system on and head up for space. The feel of flying in space is a ton different since there is no gravity or air. So they need to use reverse to slow down. They are new to this sort of flight so they get used to the controls till Fink wants to go and explore the moon. Since they got the secret to infinite oxygen from Chester, Buttercup, and Po. They can survive outside of their aircraft infinitely. They walk around and see the moon-base Chester, Buttercup, and Po set up. They also see the cave Chester and the rest got their powers from. They explore it and find that it has a history of all the great things the Stealth Birds had done. Meeting Po, getting supercar, major Davis, the Zods, the attack on the strongest base in the world. Chester, Buttercup, and Po getting their powers, the greed of the communist countries, exploring deep space, and all the rest.

Written by Benjamin Micheal Taylor.

Genre: Fictional Book, Fan Fiction.

Finished on 2025-06-11.

Short Autobiography: In a third person view.

Benjamin Taylor loves aviation and building things out of cardboard. He plays on flight simulators and does Civil Air Patrol. This is his first book and he doesn't really like anything to do with english or literature. But he was very interested in making this book.
