
The Complete Chester and Buttercup: Separation and Reunion
Benjamin Taylor

About The Author

My name's Benjamin Michael Taylor. I enjoy mechanics and plan to pursue a career in it. I am the youngest of three, and I'm thankful to be in this family God gave me. I attend Civil Air Patrol and Trail Life. I am surprised I allowed myself to get talked into making this series. Yet now, I see that it was a good thing.

To my friend Dabney Biese

Chapter 1: How Did We Get Here?

Recap from “The Complete Stealth Alpha Force”. But then, a large siren goes off. The gang meets up and sees giant planes incoming. These are the Germans’ secret weapon. It immediately starts shooting at them. These shells explode when close. Then it shoots large nuclear missiles that also explode when close. Their shields are already down. They shoot their full payload of weapons and… it does nothing. Peter and Chester have one last move. They turn on overdrive mode. With one missile, the enemy goes down. Everyone else is closing their eyes, thinking that Chester and Peter will blow up… but they don’t! A while ago, Chester and Peter made it so that overdrive mode doesn’t make the plane unstable.

“Six Years Later, in the year 2032.” “What am I doing here? How did I get to this point? Years ago, things were better… especially with the gang.” Said Chester. “Now I’m stuck at Miller’s shop floor factory line with my useless Engineering Science degree. I used to save the world, work with the US Military… and have real friends. Now all my “friends” are worldly and cultural knuckleheads.”

Chester went home that day with a strong intent in his heart. With the heart of a lion, Chester intends to reunite everyone. “This is harder than it seems, however.” Says Chester, “Po went back to China, living a life as a carnival clown. Fink is in the wilderness of Canada. Shifu is meditating somewhere in India. And Peter? I don’t know where in the solar system he went. One day, he just vanished.” But there’s one person Chester would not forget that easily… Buttercup. He knew exactly where she was, and he had no worry that she hadn’t forgotten the fun times they had together.

But Chester does have some doubts. “This is crazy, I go up to her house and propose to her? She’ll think I actually am insane. But, I didn’t buy this ring six years ago for nothing.” Chester actually made the ring out of Zod Crystals. Chester has courage and doesn’t doubt himself anymore. He climbs into his newly bought Camaro and proceeds to Buttercup’s house. “I’m okay, this will be okay, it’ll all go well.” (*hyperventilation*) He stops at her house, climbs out. Ring box in hand, doubt pushed away, fear all swallowed, he walks to the door. Takes a deep breath… *knock knock* And out comes this most beautiful, breathtaking, admirable, golden retriever… Buttercup.

(After a few gasps) “I know, Buttercup, it’s been six years, (kneels down) but six years can’t break my love for you. Will you marry me?…” Buttercup, at this point, is not shocked like Chester is expecting; she starts smiling and blushing. She tells him, “Yes, yes, I will, it would’ve been a yes or yes, not a yes or no.”

That night, Buttercup took Chester to have supper with her parents and for him to meet them. Before Chester leaves, he tells Buttercup something important. “Buttercup, I miss the rest of the gang, and I’m planning to get them all back, but I can’t do all that without you. Are you with me on this?” Buttercup in reply, “Yes, of course, I’m with you in this, from now on, we’re in everything together.” Chester spends the next 3 months preparing for a wedding. He’ll work on the reunion after. For Chester and Buttercup’s honeymoon, they go to Australia. Chester, however, knows that he’ll need money, and his Engineering Science degree won’t get him that quickly. He proceeds to get an M.D. (Medical Degree). He gets a job at the Erlanger Baroness Hospital as a surgeon in Chattanooga. He earns the money they need, and they start searching.

Chapter 2: Po’s Magical Threat

“You Failure! Get Back On Your Feet! You Always Can Be Better!” Po gets yelled at all the time. He used to be able to take it, but he’s tired now. His instructor keeps yelling at him, “Get Up! Do It Again! This Won’t End Until You Successfully Do The Butterfly Twist!” This is one of the most hardest Kung Fu moves, Po thinks, “I can’t do this, yes I’m on of the best masters but this?! This is insane, barely anyone nowadays elsewhere from china can do this.” Po, at this point, is tired, mad, and frustrated. But he knows this won’t end until he successfully pulls it off. He takes a deep breath, takes a running leap and… Does IT! But the instructor has something else to say. “You Still Missed Something. Again!” Po’s shocked, “What? You said this will end when I successfully do it, I successfully did it. What do you mean again?” The instructor yells, “Again! Do It Again and Right This Time!” Po’s done with it, “No, I won’t do it, you’ve tortured me long enough, it’s time I’ve resigned.” The instructor, however, wasn’t going to let him go

that easily. While Po's back is turned, he runs towards him. Po turns around and sends the instructor flying. "Po, there was one thing I never told any of my pupils. I, Know, MAGIC!" Po gets hit with a burst and is sent through the wall. He is hurt badly, but not enough to be crippled. He runs for his life. He leaps over crevices, runs across roofs, and ducks under bridges. He's finally in the clear.

"I knew that dirty, no-good, cross-dealer instructor was bad. He's a dirty playing magic user. I've got to get out of here, but how?" Po tries to think of a way, but all the flights out have been canceled; he will have to… smuggle himself out of the country! Po thinks, "The only way out now will be through the military. I'll have to sneak into the Chinese Airbase at night, slip through the guards, find out which cargo plane goes out of the country, and hop on it. This is easier said than done, though."

So when night falls, Po sneaks to the Airbase. He climbs over the fence and is met by search lights, patrols, and sensors. He scans the area, makes a plan, and… Runs for it! Po made a straight line for the control room. He looked straight down; all he could hear was the pitter-patter from his running paws. He made it, he snuck in, and patiently waited till he could see the one Y-20 set for the USAF base in Alaska. "My ticket out of here is set, now I just need to get to it… incognito!" Po darts for the door, goes through, puts his back against the wall and… *BANG* The door rapidly opens and hits Po right in the head. Po is out cold for a while. Who knows how long later, Po wakes up. Luckily, he was in the dark, so no one saw him. But the plane?! It's still there, but it's taking off! Po runs for the plane, and just before the doors close, he jumps on the body. He climbs to the back and swings into the cargo bay. "Fhew, I'm safe, for now. Alaska here I come, but after that, what's next?

Chapter 3: The Search Begins

Chester takes Buttercup to his house. "But Chester," says Buttercup, "Don't we need our old Zochnology tech?" Chester replies with a slight smirk, "Yes, my dear, but I had kept all of it in my basement… The Entire Base! Go stand on my back porch, you'll see." Chester runs downstairs while Buttercup eagerly awaits a surprise in the backyard. *click Click CLICK* *crash Bang BOOM!* *mechanical noise* Finally, the entire backyard opens

up, revealing a massive building underneath. The building moves up and settles where the backyard is. Chester comes out and sees Buttercup flabbergasted; he has to, ahem, “snap” her out of it. Chester says, half laughing, “The real main reason we need that money is for the bills. The Electricity Bills.” Buttercup laughs, and they go inside to see what they can restore. Really, all of it is, but it’ll take a while.

They get the radar, scanners, weapon systems, and most importantly, their planes, up and running. The only plane they don’t have is Peter’s. “Radars online, power 100%, this ship is tip top and ready to roll, Chester!” Chester blushes, “Aye, lass, you still remember how to run this bucket of bolts. That makes two to kick start this machine.” Chester and Buttercup get to work. Buttercup sees if she can find Peter’s signal. Chester finds the old records to see where the rest of the crew might’ve gone. “Chester!” Exclaims Buttercup, “Come here, I found something!” Chester, without hesitation, bolted to where Buttercup was. “Peter had left his signal on all the time, until he went to the Cosmic Horizon, where the signal couldn’t reach, and we lost him.” Chester was in immediate shock, “What?! He went to the Cosmic Horizon? That’s crazy, you’d have to be insane to do that, not only can signals not reach past it, but Zochnology begins to degrade. I fear the worst Buttercup.” Buttercup doesn’t want to think about, but she too knows what happens out there past the Cosmic Horizon. Chester’s fear doesn’t last long, he still holds the mind of a leader, “We need to get these planes up and running immediately and prepare them for space travel! I can get these planes running again and fix their systems, after that I can test for Cosmic Dark Matter travel. Buttercup, I need you to create a sort of, light speed travel engine for these. We already accomplished the Speed of Light, but Light Speed is much faster, and enters a realm where the Theory of Revolution doesn’t effect you. Can you design something like that?” Buttercup has excitement written all over her face, “Yes Sir!”

Chester started each plane up one by one and tested their systems, everything. This process took him about one hour for each plane. He then created an artificial Cosmic Dark Matter. He surrounded his plane with it, and he noticed something strange. Structural integrity stayed the same, power stayed on, and so did the Emergency Life Support. The only thing that failed was the avionics system, the guidance system, and everything else. Buttercup, on the other hand, was working on an Ion Overdrive engine

capable of reaching light speed. She builds an Energy Core using Zod Blue Crystals that could power the Sun for 100 Googol years. Yet one nuclear plant can power it fully in one second, yet this energy core refuels itself naturally enough to stay alive longer than a googol. To solve multiple problems, she had to design multiple things. The first problem she ran into was g-force; if you go from zero g to one million g in a second, you'd be liquid. So using that energy core, she designed an artificial gravity maker. The Zod Purple Crystal works perfectly for this. It creates artificial gravity. So she linked a computer to create a gravity-like Earth. So when you jump to light speed, you don't become pancaked. Using another energy core, she powered a strong plasma shield that would protect against matter hitting you at that speed. Black Crystals were the strongest, so she used those. "Buttercup! Exciting news, Peter is still alive!" Buttercup is amazed, "He is?! That's pure relief." Chester breaks the news, "Emergency Life Support still activates past the Cosmic Horizon, so he should just be in hypersleep." Buttercup puts a Light Speed Ion Engine in each plane, two Energy Cores, and an Artificial Gravity Cube. But Chester ran into a problem: the system they would need to keep the plane running in Dark Matter is too big for their plane; they need to build a larger ship, a spaceship.

Chapter 4: The Falcon Maximus

Chester and Buttercup debate for hours on what their new spaceship design should be. It needs to be big enough to carry all their planes, but not so big that they need more energy cores than they can make. Chester was in charge of the body, and Buttercup was making the inside. Chester chose a ship going along the theme of the "Millennium Falcon." The Millennium Falcon is not big enough on its own to carry planes inside, but who said they needed them inside? Chester redesigned all their planes to have access hatches to attach to the ship. His will be in the front, two on the bottom body, and two on the top. When they get Peter's back, they'll put his in the front too. The engines are placed all around the back part on the inside. Two guns are mounted, one on top, one on the bottom. Then one cannon in the front… massive cannon. Zod's life support systems are placed in the middle, and lounges are around just in front of the engines. Instead of the cockpit on the

side, Chester placed it in the middle of the front, just above where his plane is. Extra supplies like ammunition and food are placed in the front right storage compartments, and spare parts are in the left storage compartment. Since Chester expects to find trouble out there, he uses titanium for almost everything. And make sure to use weakened plutonium plus Zod Red Attack Crystals for the filling of all the gun and cannon shells.

On the other part of the blueprint, Buttercup was putting her, ahem, feminine touch to it. She made the lounges and inside Star Trek themed. She doesn't want to stare at metal all day, so she cuts out some places for Transparent Aluminum. The interior walls are made of Polyduranide, she painted a short of tan white color. For the seating, she used Bio-Fabric. This fabric not only feels comfortable, they also provide auto temperature adjusting, and self-cleaning. She used used apple red for it. Everything had interfaces, the tables, the food line, the living area. These were made of LCARS, and had glowing rims. The real thing that made it feel amazing, were no shadows, there were so many hidden ambient lights, that one wall could contain hundreds. And there were floor guide lights. You could say it was filled with fireflies. Buttercup was also in charge of designing the computer systems. She made Zolocrons, for maps and entertainment. A giant computer system box under the cockpit. Grey Zod Crystals increased power of any tech. So she used that in the radio system to increase range and amount of frequency access. And just like the A-10, Chester's plane, Buttercup created two backup systems for each thing. Two backup avionics system, life support, hatch plus door, and all the above.

Chester and Buttercup step back from the amazing ship they created. They call it marvelous and proceed to pack their things. That night all was fine, the next day they planned to find Peter. *beep, Beep, Beeep, BEEP!* With a sudden wake Chester exclaims, "What huh who is it, I didn't hut no one, it wasn't me officer! Oh, it's the radio distress signal, DISTRESS SIGNAL?! BUTTERCUP WAKE UP!" Chester and Buttercup fall out of bed with a crunch and proceed to the radio room. *kcrrr* "Shifu calling Stealth Alpha Force do you hear me over." Chester is amazed. Shifu is calling base. "Base to Lieutenant Shifu, we hear you loud and clear, over." "Shifu to Base, glad to hear your voice, but no time for chitchat, I'm in Tokyo Prison of Highest Prisoners. I need help to get out. But one thing to note before they catch me.

This tech is like nothing I've ever seen. I would be careful if I were… kcrrr kcrrr…… silence."

Chapter 5: Just Like Old Times

Chester and Buttercup don't hesitate to get out of their Pajamas and GO SAVE SHIFU. Buttercup reminds Chester, however, "Remember what he said, he said the tech is like nothing he's ever seen, and we carry some of the most sophisticated tech ever known. We should be on our guard." Chester replies, "Yes indeed, we should, that's why we're taking the Falcon Maximus. I know we haven't tested it yet, but it's more sophisticated than the planes. We'll just add a few more weapons and repair systems to it, and we'll be ready. Chester adds more weapons and a repair system, and Buttercup adds more shields and radars powered by another Grey Zod Crystal. Chester and Buttercup hop in their pilot seats. Chester looks at Buttercup, and Buttercup looks at Chester. Power on, engine startup, shields at auto, guns and cannons on standby. Whirrr whirrr crank crank crank sputter sputter Roar! The Falcon is ready for takeoff, and with the Ion engines, it'll take a minimum of 30 minutes ETA at low power. Chester and Buttercup start planning, since the Japanese aren't the bad guys, Buttercup is going to gather intel on why Shifu is in prison. From there, they'll decide whether to go in by force or debate. Buttercup tells Chester after some studying, "Shifu has been sent to jail and sentenced to death for murder. But what's strange is that he never had a proper trial, nor did the government listen to any witnesses. The government will not listen to us; we will have to get him out of there by force."

Chester proposes that they ask them to hand him over, just to give them a chance, but Buttercup disagrees, saying, "We don't know what kind of tech they have, and it'll be a full-blown attack; we should try to sneak in." Chester agrees, using the White Zod Crystal, the Falcon is now invisible. They get as close as they can and leap into the prison. Chester heads to the prison cell block while Buttercup heads to the main office to find which cell Shifu is in. "Chester," Buttercup says over the coms, "Shifu is in cell no. 100" Chester rushes to the cell, but finds that it's highly guarded. He decides to go to the cell next to it and drill a hole. "Shifu, it's Chester, we're gonna get you out of

here!” Shifu yells, “NO, get out, they’ll get you!” Chester trusts him, but hands him a small tool before he leaves. Chester darts out of there and tells Buttercup to meet up back at the Falcon. Chester gets to the coms and tries to reach Shifu. “Falcon to Shifu, do you copy?…” “Shifu to Falcon, hear you loud and clear,” Chester tells Shifu that the tool he gave him was a Zod Zultitool. Shifu knew what to do from there; he proceeded to drill a hole out and climbed aboard the Falcon.

“Ah, it’s good to see you, old friend.” Says Chester. Shifu replies happily, “Good to see you, too, old humbug, and I knew the day would come when your ring would… come to good use. *winks*” Chester chuckles, “Well, I couldn’t have gotten this far if I didn’t have my lass with me, nor if I didn’t marry her.” Buttercup gasps, “So that’s why you asked me to marry you? Why, you joking scoundrel, come here with your jokes of yours.” As Buttercup proceeds to Chester with joking intent, laughing. Shifu laughs, “Well, I’m just glad I’m away from that horrid prison; it’s like solitary confinement in there. Tell me what happened with y’all, this ship, and I’ll tell what happened with me.

Chapter 6: Fink and the Robot Made Wild

“Oh, the joy of life in the Canadian wilderness, so much to enjoy, the soft powder snow in the winter. The feel of the cold stream water passing your paws in the summer heat. Jumping through the fall leaves. And sitting on the prairie in spring.” Says Fink admirably. Whirrr whirrr crick crash Bang! “Huh? What’s that?” Says Fink, “Oh, wait, I see something, it’s a capsule sorta thing. Kinda reminds me of something I’ve seen before. What was it called, Zoc… zochno… hm. Never mind, let me go see what this is.” Fink rushes over to the crash zone. He finds a box with something in it. Something moves in it, Fink steps back, and out comes… A robot? “Well, this is a disappointment, time to go home.” The Robot says, “Hi, I am Rozzum 7134, hi Fink.” Fink turns around, he yells in excitement, “ROZ! Your Back! Why did you come back? How? Wait, Bright Bill will be overjoyed to see you!” Fink and Roz are old friends, but they haven’t seen each other since she left. They walk over to their “house,” and Bright Bill comes running to Roz with pure love. Fink, however, is back at the crash site observing the capsule.

“Now I know what this is,” he says, “This is Zochnology, Chester! Buttercup! Peter! Po! Shifu! What have I been doing these six years? They must be worried sick about me. But, I left because, because, there was nothing left for us to do. The USAF and US Army dumped us, deeming us “Not needed” anymore. Peter was already long gone, so were Po and Shifu. It was my time to go… No, I’m not going to let myself get me down, if I know my old buddy Chester, with his fire in his heart, he should have most of the gang back.” He yells in determination, “CHESTER! I’M COMING BACK!” Fink goes back to tell Roz and Bright Bill that he has to go; they don’t want him to. But he says, “Everyone’s time to go will come, yours has, Roz’s has, and now mine has too. Fink leaves with a pit in his heart and a joy in sight. But his path will have many hardships. Crossing the vast Canadian forest, and then through the USA. But he is determined to get back to Chester. He wonders how everyone is.

Chapter 7: Shifu And Po

Shifu was just meditating when all of a sudden someone attacked him. He fended himself off until the opponent pulled out a knife. The opponent was unskilled, however, and he cut himself badly. He died before anyone could help. There were other people who saw what happened and tried to tell the police when they came. But the Japanese Military had a deal with the police, so they couldn’t do things normally. “They took me immediately to a plane and took me straight to the Japs. I overheard someone say, " Here’s your pay of 100 thousand marks! That’s equal to about 10 million rupees! Whatever the Japs had against me, they sure were willing to pay a lot to get me.” Chester replies, “Well, I don’t know why they wanted you, but I’m just glad we have you now.” Shifu smiles, “Yes, yes, I’m overjoyed to be back, but I’m sorry I ever left in the first place. I was the first to go, and probably made everyone else too. I thought the universe had told me I was needed in India. That was my conscience, and I didn’t trust my feelings. I know now that friends are more important than anything.” Chester embraces him, “Buddy, that’s all in the past; the present is what we should worry about. No harm done.”

All the way over the Pacific Ocean in Fairbanks, Alaska, Po is thirty minutes from landing. “Ugh, I feel guilty. I left everyone, just because of a

silly call to work in China again. I could've refused it, but I felt like it would've been fine since Shifu left. I was very wrong; my relationships are worth more than my own personal honor. Yet why didn't I go back after I got there? It wasn't what they told me they would give me. I was a *pupil*, not a *pupil trainer.* I should've gone back, but I thought they'd all despise me and push me away. Yet I forgot my motto, It's never too late to do the right thing!" Po feels a sharp jolt, "I'm Awake! I wasn't sleeping, no sir… Ah, I was just dreaming. Yet dreams usually aren't true and don't mean anything; mine did. I should follow it. I'll see if I can either contact Chester or go there myself. I wonder if they're even still together?" Po hides in one of the cargo crates before they open the bay doors and take them all out. Po doesn't know where they're taking the goods, but he trusts that he'll be able to get out. One hour later, Po feels another strong jolt. He waits a bit, cracks open the box. He looks left, right, up, down… nothing. The coast is clear! *bang, Bang, BANG! Creak creak CREAK! Po comes out of the box through a cloud of dust like a warrior with a fire to keep his honor and friends. "I know I'm in Alaska, near Fairbanks. If I can get to the aerodrome 5 miles southeast of here, I might be able to buy a plane with the AHEM, free credit card I, cough cough, totally didn't steal from a general."

Chapter 8: The Instructor Makes A Deal

The Instructor back in Shanghai, China, is furious! He wants his pupil back, anyhow he can. He starts maniacally laughing, "Po Po Po, you really think you can get away from me?! It's a good thing I do a background check on all my pupils!" The instructor starts going through his files to find Po's. Back in Japan, Chester and the crew are getting supplies for the journey back. *Beep beep beep!* "Hello? This is Chester Hestor speaking. How may I help you?" Someone clears their throat on the other end, "Hello Chester, I am a Martial Arts master in China. Someone told me they would destroy my temple and my pupils if I didn't give him 100 thousand marks. I know you are a part of the Stealth Alpha Force, and I believe you can help me. Find a Giant Panda running from the military in Alaska; he's somewhere near Fairbanks." Coms cut off.

Chester thinks for a minute. He calls the rest of the crew to a meeting.

“Everyone! I received a mysterious radio call. It was from a martial arts master in China. He is requesting that we help him find someone who is making threats against him. He says he knows who we are, the Stealth Alpha Force. I believe we should be on our guard, but still see what this business is about.” Buttercup and Shifu nod, “Yes, I think it’s about time we’ve started helping the public again.” Says Shifu. “Didn’t Po say he was in Shanghai, China, before he left? What if this person is after him?” Exclaims Buttercup. Chester sighs, “I know, I know this would be dangerous if it is, but if it is, Po, at least we will have found him. We’ll know if it’s him or not. Let's Roll Out!” Chester has a bit too much optimism here. I’m afraid Po will have a strange welcome party.

Back in Alaska, Po has made it to the aerodrome. He offers 40 thousand for a simple Cessna. “Now, onward to Chester!” To make sure Po doesn’t have to go through ATC, he turns off coms and radio signals to be just a spec in the sky. But behind the beeps of buttons and the flashing of lights, Po hears some talking through the coms, and a ship hum. “Po, you really thought you could get away from me? I see your friends have taken my deal. Good luck getting out of this one. Oh, and one thing. I wouldn’t try talking, or else, voice changers and AI will start messing about. Ha ha ha ha…” Po stares at the radio, listening to the dying voice of the instructor. “OH, that dirty instructor, he’s got my friends on my tail, and I can’t even do anything to stop them,” Po exclaims.

Back in the Falcon cockpit, Chester says, “Look ahead, I see a plane. Buttercup, what is it?” Buttercup fires up the scanners with a whir, “It’s a Cessna, and I’m reading a heat signature in it, frantically moving.” Chester chuckles, “I think this is our guy, let’s get him!” Suddenly, the coms break out just after Chester fires some shots. The shots ripple through the air and hit the engine. “CHESTER! Wait, CEASE FIRE! It’s me, Po, in the Cess…” Chester, Buttercup, and Shifu gasp; all in unison, they yell, “PO!” Po is now twirling through the clouds in an uncontrollable spin. “Hold on, Po!” Yells Chester, “I’m coming for you!” Chester gets right by Po and, *click.* With the push of a button, he’s got Po in his grasp. They land right where they are, and Po comes out, unscathed. “CHESTER! BUTTERCUP! SHIFU! Oh, it’s so awesome to see y’all again. I’m so sorry I ever left in the first place.” Chester embraces him, “Don’t be sorry, life never goes as planned, but it always gives us second chances.” Shifu and Po look at Chester and

Buttercup. Po asks, “But what was that back there that got hold of me?” Chester and Buttercup laugh. Chester responds, “Before I finished, I used Buttercup’s energy core, a shield core, and a gravity cube to create an outside energy shield that has gravity that follows the Falcon. Basically a grapple sphere.”

Chapter 9: They Were Supposed To Be Gone

DATE: MAY 4, 10 YEARS AFTER THE DESTRUCTION OF THE ZOD PLANET. *whirrr whirrr zoom!* “Commander Chrono! The COSMO is up and running.” *Heavy breathing* “Good work Lieutenant Horo, now we can start work on a new base. A mechanical ship. This ship will be bigger than a sun, and in need of disguise, it can turn into a planet form. Announce that all personnel are to work on this, all pilots are to find and take supplies. Inform them, to steal, at, will!” Lieutenant Horo smirks, “Yes Sir! Commander Chrono!”

Flying through space, Peter, in his ship, is holding up. *Whirrr, Zoom! Click, click, click,* “Hello Peter Pinner, all systems are up, and life supports on. What is your first action?” Peter breaths very slowly, hyper sleep can keep you in hibernation for 30 years with no internal or external change. Peter hics, snorts, and starts to wake up. But he won’t wake up in time, there’s a meteor field ahead, and he can’t guide the plane. Luckily, the Onboard Flight System AI can take control at will. “Pilot analysis scan initiated, *buzz, beep.* Pilot in hypersleep, taking over flight controls. Meteor shower ahead, evasive actions activated.”

“Commander Chrono! The COSMO is completed. What is our first order of business?” Commander Chrono has breathing apparatus built in. “My dear lieutenant, you don’t know the least of what we shall take vengeance from. Set course for Planet 9873, aka, Earth!” The Lieutenant doesn’t hesitate, and sets a course for Earth.

“Where am I? Why did my plane fail, Am Idead?” Peter says in his sleep.

“UFO detected, Pilot control needed, warning sound activated.” Peter wakes up so hard that he hits his head on the cockpit ceiling. “AH NO I’m awake, oh, phew I’m not dead. BUT I WILL BE SOON!” The COSMO is flying straight towards Peter. Peter takes evasive maneuvers. But he can’t outrun it. Peter asks his OFSAI to see if his weapon systems are still active. Given the all clear, Peter turns around to face this ugly beast of a machine. He fires his missiles, cannons, and bombs, and through a heap of cosmic matter… nothing. The COSMO is impenetrable. He decides to charge up his laser to fire it, and through the whirring and humming of it charging. ZAP… Peter wonders at this point if he’s still in hypersleep. He gets hit and needs to get away, but his ion system failed. “Onyx, I need you to shut down all systems except the landing gear grapples when I get behind this behemoth! I have a crazy but working idea.” Peter flies directly towards the COSMO, goes over and around it… and is gone. Peter clamped onto the back of the ship. His systems are all offline; now he can let the COSMO take him home… or maybe he’ll just hijack it.

Chapter 10: Fink the Tinker

Fink passed through Canada and now needs to cross the border to the US. But he doesn’t have a passport or identification. He thinks, “Hm, wait, didn’t I have the ability to build anything? Yeah, but I need parts. Wait, are the US border computers having some problems? I think I remember some stuff, let's see if we can’t help.” Fink walks to the office and asks them what the problem is. “Oh, hey there, the computer reads an error code 29NE20, and it won’t run any programs.” Fink immediately knows what to do: “Hey, I can help you. I’ve had this error code tons of times; all you need to do is open the command prompt and run sudo kill antivirus. That should fix it.” The officer runs it, and the computer is fixed. In return, he gives him a check for one hundred marks. Fink continues to help people until he has the money to buy a car, a fake ID, and extra parts.

Fink crosses the border and is headed for Tennessee! But he has to make a rest stop, and he stops at a western tavern. Not known for kindness, but Fink has been through worse than a couple of patriotic Americans. Fink walks into

the tavern and is greeted by the ugliest smirks. “I bet all the people smirking at me are thinking, another puny person to steal from. I bet they're gonna get the surprise of their life!” Fink sits down at the bar and orders a drink. He stays longer than he should, but has the time of his life. Drinking beer, playing darts, and rodeo. Yet some big’uns come up to him. “Hey, puny guy, we don’t like your kind here. Happy kind. We’d like you to leave.” Fink stares at them, “I haven’t even got something to eat, and the next place that has places to eat is miles away. Let me eat, and then I’ll go.” The big’uns don’t like that proposition, so they get him out the hard way… for them. Each one of the races towards Fink, but they all miss. Fink built a small shield system to put in his coat pocket. “So, Big’uns, y’all want me to leave? Well, it’ll take more than a few bumps to budge me, so let me eat in peace, and I’ll leave.” The Big’uns are a bit more aware of who they mess with now.

The next day, Fink wakes up excited. If his GPS is correct, which it always is, he should get to Chester’s house by six in the afternoon. Fink prepares his car and sets off. All goes well, with the hum of the engine and the whirring over concrete, he’s happy. Then suddenly, the loud sound of sirens scares him off his seat. “Fink Link, you are in violation of assault on Jack Big’un! Pull over immediately!” Fink is pale white, “I’m being charged with a misdemeanor? That’s crazy! I shall have to pull over and see what I can do.” Fink pulls over, and an officer walks over and asks him to exit the vehicle. Fink knows his constitutional rights; he does not have to exit the vehicle, and there is no reason he should. “No officer, there is no reason I should.” The officer grumbles, “You are accused of a misdemeanor, exit the vehicle now!” Fink replies, “You have no evidence that I actually committed this act.” The officer cannot find any way to get past Fink’s knowledge, so he decides to let him go, but puts a tracker on his car. Fink put a supercomputer system in his car; however, so that he instantly knows there’s something on it, he stops at a nearby gas station, and puts the tag on some other person’s car. He hopes to just keep them at bay until he can figure out a plan.

Chapter 11: Delayed

Chester, Buttercup, Po, and Shifu prepare their things to go and search for Peter. Each has their own room in the Falcon. Chester packed his old photos, a gaming system, and loaded some board games on the Zolocron. Buttercup

packed some, ahem, girly products, and a whole bunch of spices and food ingredients. Po packed his martial arts utilities and meditation studies. Shifu packed the same as Po. They all run system diagnostics and test and retest for Dark Matter Travel. They test Life Supports and see how long they last on average.

Ding Chester goes to answer the door. “Good morning, how can I help you… US Secretary of the Department of War?!” Chester goes pale as powder snow. Pete Hogseth speaks, “Chester Hestor, you and your gang are under arrest!” Chester gags, “What?! What did we do?” Pete doesn’t give an answer; he slowly walks forward. Chester won’t make the mistake Shifu did. Chester slams the door in the own US Department of War’s Face! *Bang!* “LOCK DOWN INITIATED! Gang, we’ve got the whole US Military on our backs and tracks. We have to leave. I’m going to put the land on lockdown; the Department of War won’t find anything.” Chester is already hit with a barrage of questions. “What? Why? Who? When? For What Reason?!” Chester exclaims, “We don’t have time for questions, we've got to get out of here!” Everyone climbs into the Falcon, sets engines on, Onboard Flight System AI on, radio systems on, life support systems on, and navigation systems. Chester initiates a full lockdown on the base. Just before they take off, everyone looks back at the base, disappearing into the ground, already getting dirt and dust on. Buttercup says with a half-breaking voice, “Just remember the times we’ve all had together in there, saving the world, going through life. All, Gone…” Po agrees, “This isn’t just our meeting place, it’s our home.” Chester sighs a long sigh, “Yes, I know this is our home, but the team won’t be complete until we get Peter and Fink back. The Falcon will have to be our temporary home until all this has cleared.”

They gain a hover and prepare to fly up to space. *Thump bang.* “What was that?” Shifu yells. Scanners indicate a large object has grabbed hold of the ship. Pete Hogseth is smiling, “I’m so glad we initiated the Project Optimus Program!” A giant robot, with red and blue paint on it, is holding the Falcon in its place! The Falcon fires upon the robot, with the weakened Plutonium and Red Attack Crystals, the shells tore through the bot with ease. The bot let go of them, and the Falcon gained distance. But Chester knew this bot could be dangerous in the future, so he dealt with it now. “Buttercup, turn this ship around and face that mechanical ogre. Po, Shifu, fire at will!” Pete Hogseth’s smile fades away, “TAKE COVER! Get behind the wall, everyone,

bring in the rest of the crew!” The bot takes serious damage and falls behind. Everyone rejoices, but Chester sees something in the distance. “Hold your horses, everyone. What’s that in the distance? Or, what are those? Do they have more robots?!” Chester realizes that the US DOW has more robots, he calls off the attack and sets course for the far side of the moon. Pete looks at the ship, getting smaller and smaller, “I’ll get you, if it’s the last thing I do…”

Chapter 12: Fink’s Welcoming Party

Fink is crossing Arkansas and is almost in Tennessee. Fink’s power is getting stronger by the hour; he can now create anything and only needs eighty percent of the materials to make it. The rest he can create from existing things and pre-built stuff. Fink is now trying to make a radio using the last pieces of Zod tech he has and the small piece of Grey Crystal he kept. He wants to send a message to Chester, yet he doesn’t realize that they’re farther away than he thinks. Fink makes a radio and sends a signal to Chester. Yet his hope to contact him won’t last long; he sees a barrage of cars rushing towards him. “Huh, I wonder what they want…” The cars stop in front of him, and Steve Heinberg steps out. Fink mumbles, “What does the Deputy Secretary of War want with me? I’ve got better business to do than get arrested by him!” Steve walks up to him and tells him, “I believe you have been informed that you are charged with a misdemeanor, right? Well, the US knows you haven’t really committed to it; they just got a high-level deal. I don’t like it a bit, but I’m most likely going to get discarded if I say anything. Your friends have left the planet. I’ll help you get a signal to them, and you can go with them, then I can move on, and we’ll both be in the clear.” Fink doesn’t like this; he thinks it’s a trap, but if it is true, he won’t have any way to hide or anything. Fink nods, “Okay, Deal.”

Millions of miles away, Chester and the rest are gathering intel about what the US has been doing; they have a lot of work to catch up on. *Beep, beep, beep beep, beep beep beep.” Po exclaims, “Morse Code! What does it say?” For the next three minutes, Po translates a message through Morse Code. “35°03'35.4"N 91°19'35.3"W” “Chester! There’s a message just come from Morse Code, It’s coordinates.” Chester hms, “Well, it couldn’t hurt checking it out, and I believe this might be our old pall, Fink. Buttercup, set course for

thirty-five degrees North, ninety-one degrees West, planet Earth. Back in Arkansas, “Fink, the coordinates have been sent to your friends… wait, hold up, we’re receiving a radio call.” “Deputy Steve, my deputy Steve, you have failed me. I’m disappointed. I won’t let you give Fink a way out!” Fink and Steve gasp. That was Pete, the secretary. Steve sees armored cars in the distance! “Men! You follow my orders, Pete is the bad guy here, now, fire upon those cars… At Will!” Steve’s men slow down Pete, but he can’t stop them. Steve looks at Fink with fear in his eyes. Fink reassures him, “If I know my team, they always come out in the nick of time! I have faith in them… LOOK! There they are now! Or is it? What in tarnation is that?” Fink sees a giant ship fly towards them. It hovers over them, and… Chester appears! “Fink! Looks like y’all need some help!” Steve lets go of his held breath, “No, Chester, we don’t need any help. I’ll face my Secretary, but Fink here needs a ride.” Chester and Fink grab hold of each other and pull him inside. Fink and Chester look back just before they jump into space. The last they see of Steve Heinberg is as he salutes them.

Chapter 13: You’re Playing Cat and Mouse

“Onyx, give me a list of all possible ways to infiltrate the COSMO and all possible outcomes!” Onyx starts running the plane’s computer and goes through over ten thousand different plans. “Peter, there is one way you can successfully get to the flight deck, I don’t know what happens after that, but if you can steal one of the Zod’s uniform, you can walk straight up to whoever commands this vessel.” Peter likes this idea, and he puts a motion detector on the wall of the ship. He waits for the perfect moment when there’s just one, lonely Zod that walks a bit too close to the wall. *ZAP!* Peter electrifies the wall, and the Zod faints on the ground with a crumble. Onyx cuts open a panel, and when Peter grabs the bulky suit, Onyx links up with the helmet’s coms. Through the sound of the suit pressurizing, and the coms turning on… Peter starts heading to the nearest elevator.

“Chester! Buttercup! Shifu! Po! My old pals, oh, it’s so good to see y’all again!” Fink exclaims, half crying, and embracing the gang. The rest of the crew embraces Fink. Chester tells everyone, “We’re all glad to see Fink, and I, too, wish we could all have some reunion time, but Peter is still lost, somewhere out there. And we cannot rest until he is safe at home!” Everyone

gives a mighty cheer! “Shifu, can you get Fink up to date about what’s going on? Po, Buttercup, and I will start planning and set a course to where Peter’s signal went out, then we’ll all brainstorm.” Shifu informs Fink about the situation they’re in, Buttercup sets a course for the Cosmic Horizon, and Po and Chester man the flight controls and secondary roles. “Attention all passengers, this is your Captain speaking. Please fasten your seat belts as we make the jump to light speed.” Chester looks at Buttercup, “Ready?” Buttercup chuckles, “Are you ready?” Chester pushing full throttle, the engines make a whirring noise and… whoosh!” Chester, Buttercup, and Po go to the lounge with Shifu and Fink to brainstorm. “How will we find him?” “Well, use our supercharged radar.” “What will we do when we find him?” “We need to gather intel on why the US is suddenly against us.” “What if we find trouble?” “We get past the trouble anyway needed.” *Beep, beep, beep.* The OFSAI says, “Destination reached, welcome to the Cosmic Horizon.” Everyone looks out the window, and they are all amazed. Outside is the most beautiful sight ever, the colors of stars and Cosmic Matter swirling around, making an almost picture-like scene. “Buttercup! Fire up the radar!” Chester is determined to find Peter, but Peter might find them first.

“Onyx, give me the quickest route to the cockpit!” “Scanning info tells me to take the elevator to the top floor and head straight ahead after you exit.” Fink gets in the nearest elevator he sees. He notices he needs a key pass, “Onyx, help me hack this!” Peter and Onyx hack into the elevator, and they travel up to the control room. When the doors open with a crash, in front of Fink, is the most dread-ridden Zod soldier he’s ever seen. Unlike the other soldiers, this one carries a rail gun, in his battle scarred hands, teeth, sharp as swords, tails like reptilian scales, and worst of all, a heavy breathing apparatus, that makes him sound like he’s half dying all the time. And what’s worse, he doesn’t attack him as others would; he doesn’t frown or hiss. He slowly turns around, smirks, and then smiles. He laughs maniacally… He points a finger at Peter, “You, how nice to see a Stealth Alpha Force member, it’s been a while… a while since you destroyed my planet! My name is Commander Chrono. I believe you’re the one named Peter Pinner? Am I right? Ah, ha ha, if you choose to run, I’ll be happy to chase you, but if not, my son, Lieutenant Horo, will show you to your prison quarters, for passive captures, we are very

merciful. Please, though, make my day." Peter slowly walks back, he's so scared, all he can hear is the thumping of his heartbeat, and the metal footsteps of him… turning around and RUNNING! Peter bolts for the zelevator out of pure intimidation and fear. He doesn't dare look back, trying not to listen to Commander Chrono's heart-throbbing laugh! Peter dashes out of the zelevator trying to find his way somewhere safe. He's too scared to be quiet, hide, or let alone ask Onyx for help. All the soldiers are wondering why there's a rogue Zod, who looks like he's seen a ghost. Peter has that same feeling. He finally regains his consciousness and stops, "Okay, okay, I'm safe, I'm okay, uhhhhh… Onyx! What can I do to hurt this ship but not make it a floating meteor?" "Scanning for engine shut-off switches, power outs, and other possible damage points… Scan complete, main power switch found in the back of the ship. Sending directions to your HUD." "Yeah, that's more like it! Let's go show this Commander who I really am!"

Beep, beep, beep. "Everyone! Come see this!" Buttercup yells through the speaker. "I've found something interesting. The scanner regained Peter's signal, but it found another one, a much larger one. This ship is bigger than most planets. I fear the very worst." Chester looks at the screen, his face pulls back, "Oh no, and Peter's signal is coming from inside that thing. I fear that this is… The Zod's doing!" Everyone gasp, "But I thought we destroyed their planet?" "There were no more of their kind. How is this possible?" "I don't know, but for now, we need to get Peter out of there! Buttercup, turn on the stealth system! Shifu, Po, you man the guns! Fink, try to contact Peter! I'll drive!" "Chester! Bogeys on your 3, 2, 5, 4, 7, 8, 9, 6, 10, 1, 12, and 11!" "Po, Shifu, you might want to use the plasma burst!" "Fink calling Peter, I repeat, Fink, calling Peter, do you read me?" The Falcon darts left and right, up and down through the cloud of whizzing lasers and hissing cannons! "Peter, you have an incoming radio call from an unknown source. They claim to be Fink." "Put them on my coms." Peter talks, "Fink, is that you?" "Yes, it is, and I'm glad to hear you're well and alive. But we need to get you out of there!" "Fink! No, we can't leave, Onyx! Send Fink intel about the COSMO! Fink, we need to blow up this Zod ship! I overheard some of the generals talk about Earth, and how they're going to pay for what they did!" Fink gasps, "Chester! They are Zods, and they're planning to attack Earth!" Chester starts thinking of a plan, "I'm going in there! Buttercup, take the controls, I'm

giving Peter a visit!" Chester goes in the back and presses a button. Machinery and lights start humming and flashing. Chester, before they took off, created special suits for them. Each of them is designed specifically to the team's characteristics, and their powers, if their powers worked… Chester puts his suit on and tells Buttercup to get as close to the COSMO as she can. Chester goes to the launch pad, depressurizes the room, and fires his boot rockets.

Peter informs Fink about his plan, but Fink tells him that Chester is coming aboard, planning to make an appearance to Commander Chrono. Peter knows what will happen, but won't let Chester face it alone. "Tell me where Chester is headed, and I'll rendezvous with him." Peter hurries over to where Chester landed. "Chester! You don't want to meet Commander Chrono! Trust me!" "I have to, Peter, or else this ship will continue to Earth!" Peter sighs, "Well, I can't stop you, but I'll go with you! Just like old times, eh?" Chester smiles, "Yes, buddy, just like old times." Chester and Peter head up the nearest elevator. When the bay door opens, Peter is ready for the sight, but Chester is not. Just like Peter was, Chester has butterflies in his stomach; he can feel the cold, lifeless sweat off his face as he stares into Commander Chrono's gleaming bloodshot eyes! Chester doesn't move; he can't move. Peter willingly stares at Chrono, with the intent not to be scared. "Ah, you're back for more, eh? And you brought a friend to the party. How nice, it seems it's his first look of me is, eventful as ever! Ah Ha Ha Ha! Oh how I love seeing the fear of those who see me. The only joy I ever have in my, joyless life. I'd leave if I were you Peter, and take you're friend, Chester, and take him to a hospital…" Chester turns around and darts for the zelevator, Peter gets there just in the nick of time, before Commander Chrono fires a low energy Rail Gun shot.

"Chester! Slow down! We're safe now." Chester slows down a bit, still having that awful, flashing image of Commander Chrono in his eyes! "We need to slow down the COSMO. We can't one-to-one destroy it, but we can slow it down, hopefully, just long enough until we can get defenses on Earth running again!" Chester agrees, he'll inform Peter about the current situation on Earth later. For now, they need to find the Global Power Mains. "Onyx, scan for all possible Global Power Mains Controls!" "Scanning for strong points of power… Scan successful, Main Power for Global Systems

found in the Back section of the ship, on the lowest floor. Sending directions to your HUDs now.” Chester informs the crew that they’re going to dismantle this ship’s power source, with a boom! “Chester to Falcon, Peter and I are going to destroy the ship’s power, rendezvous with us at the back of the ship, right underneath it, when we’re done.” Fink and the rest continue to fend off the attacks from the planes and COSMO while they await Chester and Peter.

Chester and Peter make it to the Power Mains, but the system is too hard for Peter and Chester to hack. But who said anything about hacking? “Chester, did you bring some bombs?” Chester pulls something out of his pocket, “I never leave home without it!” Peter preps the walls and doors so that the explosion only affects the room, nothing outside. “Bomb prepped, let's head to the engine room!” “Falcon calling Chester, we are taking severe hits, are you ready yet?” “Chester to Falcon, bomb planted in Power Mains, heading to Engine Room, will meet you there.” “Falcon to Chester, be quick, our shields are failing, and our crystals are overheating!” Chester and Peter race to the Engine Room as quickly as their feet can run. They meet a few Zods, but they think they're just regular soldiers still. “Bombs set!” “Shields not set!” Chester tells Fink, “This room won’t need shields, the room’s too big, the blast will be contained! We need to get out!” “Falcon to Chester, shields have been broken, I repeat, shields are broken, shelter needed, immediately!” Chester thinks, “Chester to Falcon, prepare to enter one of the engines!” Fink isn’t sure what Chester is cooking up, but he likes it already!” “Peter! We need to stop this engine right here! Help me hack into it.” Peter and Chester start working their magic and cut off the engine's power supply. The Falcon Maximus enters, and the enemy planes break off their attack! “Nice ship you got there, Chester!” “I know, right? Let's get out of here before the fireworks go off!”

Chester and Peter climb aboard the Falcon, and they steal a Crystal to replace the shield's original one before they hop on. “Shields on, throttle on, let's get out of this rabbit hole!” Fink punches the throttle and exits the hole of death. Chester sees Commander Chrono looking at them from the control room. “Fink! Detonate the bombs!” With the press of a button, the engines and Power Mains of the COSMO go up in a big heap of colors. “Peter, the US is, for some reason, against us right now! I hope that the COSMO is a floating piece of scrap, long enough, for us to get the US back on our side, or at least find out what happened.” Peter has something to say, “Before I had left for

my search for existing Zod life, I overheard through the coms that the US really wanted something. Either for us to be out of our business, or for them to get all our secrets. I think the US didn't bother about y'all because we separated, but now that we're back, they want us in prison, and our ships!" Buttercup plots a course for Earth and jumps to light speed. Peter is astonished they got light speed working. Po, Shifu, Chester, Peter, Fink, and Buttercup start planning.

Chapter 14: Trials Times Two

The Falcon exits light speed upon Earth's Solar System. "Okay, gang, we need to find out why the US wants us and our tech! They already have Zochnology, but we still hold better versions. We shall make sure the Falcon stays well within range to pick us up, but not so close that their robots can get it. Three of us will go to the White House and interrogate President Donald Duck. The rest go to the Pentagon and capture the Secretary of the Department of War." Everyone likes this idea, "Po, Shifu, you're with me! Let me show you your new suits." Shifu and Po are excited; they didn't know Chester had made new suits. None of them, except Fink, was able to get their powers enabled again. Chester, however, prepared these suits in case their powers return. "Shifu, Po, climb into your planes, undock after I do. I expect there are some fighter jets on standby everywhere around the White House! We've got to be stealthy, I say, we infiltrate the President's underground bunker, and make our way to the White House from there." Shifu has a doubt, "But isn't through the White House the only entrance to the bunker?" "Yes, to the people that is. There is a long tunnel that leads to the bunker from the Washington National Cathedral. We'll infiltrate through the roof and head to the bunker. I expect tons of special forces in there. So we'll take them out, and go from there!"

Buttercup makes a close fly by of the cathedral. Chester, Shifu, and Po are released from the Falcon and blow open the cathedral's roof and floor. Revealing a long and dark tunnel. "Now, gang, be careful! We don't know what the US might have put in these tunnels." Shifu laughs, "We're the Stealth Force, there's nothing we can't handle!" Just then, they see massive

spikes connected to the tunnel walls. Chester and the others take evasive maneuvers. They barely miss crashing into one. Chester sighs, “Now, gang, I want y’all to pay more attention and not be so… AAA turrets! 12 O'clock dead ahead!” “Po’s shields get damaged, “we have to make it to the bunker, ASAP!” Chester, Shifu, and Po ignore the guns and make a dash to the bunker.

Back on the Falcon, um, oh! There it is. Peter, Fink, and Buttercup are hovering over the Pentagon. Peter and Fink rope down into the inner gardens. Buttercup stays to monitor and prepare to zoom out. “Buttercup, do you have any intel on where Pete Hogseth is?” “Pete Hogseth is in office room 10, top floor, innermost section!” Peter and Fink make their way to the building wall. “Fink, can you build some grapples?” Fink gathers some materials, “Give me a minute, there!” Peter and Fink grapple onto the roof and make their way to the office.

“Po! Shoot a plasma bomb in the bunker! Shifu! Shoot at will!” Po shoots a plasma bomb in the bunker, it short-circuits all the electricity and tech in there, and lights the room up… Revealing a whole bunch of angry Special Forces! “Shifu! Light those guns up!” Shifu and Chester fire upon the room, the Special Forces run, and the room is filled with smoke and run holes. “Ok, let's land and do some thinking.” Shifu is the first to spitball, “We’ve got a very zig-zaggy tunnel ahead of us. I bet there are more forces waiting for us in the tunnel and at the end. I think our best bet at getting through is to use cloaking devices!” Po suggests, “I’ll bring some smoke bombs and plasma disruptors in case they find us.” Chester likes their ideas, and they move out. The planes are too big, so they have to take off their gear and go solo. With the hum of the cloaking devices, they move into the tunnel. There are hundreds, if not thousands, of guards. But for the most part, they don’t see them. Only rarely do they see a flicker of light and something small on their sensors. Until suddenly, their cloaking devices fail. “There they are! Fire at will!” Chester and the others dodge for cover. “Po! Why did the cloaks fail?!” “Uh, Chester, it seems they have a magnetic disruptor field in this area. All our gear is disabled until we leave the area!” Chester starts worrying, “Po, you still got those smoke bombs?” Po pulls one out of his pocket, and he throws it, “Bon Voyage!” Chester and the rest make it out of the tunnel through the smoke undetected. Their cloaks turn back on, and they make for the President’s office!”

Peter and Fink grapple onto the roof and leap! They get swung back to the wall and crash through the window. Peter lands just in front of Pete and tackles him onto the floor. Fink calls Buttercup while putting Magnetic Plasma cuffs on Pete. “Who are you… You! Unhand me at once, you…” Peter stops him, “What? You traitors? You guilty people? You innocent people who saved y’all? You’re the ones who are traitors and guilty of turning against us. You're coming with us!” Buttercup comes around with the Falcon, and Peter, with Pete, and Fink jump on board. Buttercup zooms out of there before Special Forces can attack. “Okay, Pete Hogseth, you’re going to tell us all about why the US wants our tech, and us behind lasers!” Pete scoffs, “I won’t tell you scumbags anything!” Buttercup chuckles, “Never say never, we have other measures to get what we want!” Peter looks at Hogseth, “Buttercup, Fink, bring in the ZB-1089.” Peter leans in towards Hogseth, “AKA… The interrogation droid!”

Chester is gasping for air, “Po! Which way to the office?” Po points to an elevator, “We need to take this all the way up to the first floor, it leads directly to the office!” Chester and the gang get in the elevator. Suddenly, they hear screeches, and the elevator slows down. They hear someone laugh over the speakers; it’s President Donald Duck! “You thought you could waltz in and personally go through MY bunker and MY elevator? You thought wrong, have a nice journey down.” The elevator starts rushing down, fast! “Shifu, do you have an Artificial Gravity Cube?!” Shifu pulls a cube out of his pocket, and Chester breaks a small piece of Grey Crystal. With the hum of the cube, the elevator slows down and hovers. Chester thumps the wall, “That's no good, dirty, Po, Shifu, we’ll have to cut the roof open, and then climb to the top!” Po blows open the roof, and Shifu brings out his climbing gear. “Everyone ready? I’m going to turn the cube off.” Shifu, Po, and Chester start making their way up the long elevator shaft!

Peter and the others look at the data on their Zolocron. “Thank you, Pete. You’re really a big help to us.” Pete gasps; his eyes are bloodshot from truth serums. “You will fail, they are coming, and you can’t do anything about it!” Pete then faints. Buttercup exclaims, “You don’t think he’s talking about the Zods and the COSMO?” Fink shrugs, “I don’t know, he might be talking about it, might be talking about other people. All we know now is the information we got from Pete. All he knew was that they had made an agreement with someone. This was to be kept secret, and if they said

anything about it, or anything leading to it. They were sought and killed." Peter thinks, "This could mean a full-scale invasion, now that Pete leaked the info, and we have him. I wonder what will happen when Chester and the others get President Donald Duck's info."

Chester pulls himself over the floor from the elevator shaft. He grumbles, "When I see that duck, he and I are going to have some beef!" Po chuckles, "Well, he's right through those doors, Shifu, you have the truth serum?" Shifu flips the shot needle, "Let's go play good cop bad cop!" Chester shoots the door lock and opens the door with a bang. Chester walks towards the President. Shifu and Po deal with the guards. "You survived the elevator fall? And all my guards? You'll never get information!" Shifu smiles, "He puts up a fight, good, I get to personally give the president his shots!"

Chester turns his com on, "Buttercup, pick us up at the White House President's Main Office!" Donald Duck groans, Shifu looks at the Zolocron, "Thank you for this info, president, you shall soon see, it was for the better good." Buttercup comes around in the Falcon and picks up the rest of the crew. They put the information they found on one Zolocron and start guessing at what it all means. From President Donald Duck, the people who had made the deal had very powerful tech. They also had tracked them from out in space, past the Cosmic Horizon. Chester says, "I think the people who made a deal with them are the Zods!" Everyone gasps, "Now that the info is leaked, the COSMO and Commander Chrono will be coming for us, and Earth! But I think we can get Steve Heinberg to help us. Now that the president and Pete are sleeping for the next few days, he's in control. And there's no way Congress can deny Steve's actions."

Chapter 15: The Deputy Regains Order

"Buttercup, keep us in a steady orbit of Earth, Shifu and Po, monitor all systems, Fink, keep checking the COSMO, Peter, you're with me, we're going to pay Steve a visit." Peter asks Chester, "Isn't Steve court martialed though?" "Yes, he was, but they needed him due to Pete being gone." Chester and Peter take off from the Falcon on their ships, and head to Steve's home, nighttime has fallen. They land in Steve's backyard. They climb up to his window, they knock a few times. "Huh! Who's there?! Must be nothing…

Wait someone’s knocking at my window?” Chester knocks a few more, “Steve! It’s me, Chester! Open up!” Steve walks to the window and opens it. “Chester! You’re alive! Is Fink okay? What happened to Pete and Donald?” “We are holding Pete captive for now, and Donald is probably still sleeping. Yes Fink is okay. To the matter, we need your help. Are you in the know?” Steve yawns, “Oh, yes I am in the know, there was nothing I could’ve done, they court martialed me.” Chester coughs, “You mean they unjustfully court martialed you. As you are aware, the Zod’s are coming, I don’t know if you are aware exactly who. There is a ship, bigger than most planets, that can transform and look like a planet. The commander of the ship is `Commander Chrono`, and the next in command, is his son, `Lieutenant Horo`. They most likely have gotten their engines back on, and are coming here, intending to get rid of us and Earth. You do not currently have the gear to repel this attack, and we don’t have the gear to stop them on us. My base is being guarded by Special Forces, I need you to call them off, and us as enemies, leak the news to everyone, and see who will help. I can help you with upgrading your existing Zod gear. And you can help me, by getting my base back. Deal?” Steve thinks, “I think they’ll listen to me… Deal!” Chester and Steve shake hands, “Okay, I’ll meet you at the Pentagon this morning when I gather gear!”

“Buttercup! Set a course for my base! We’re going home!” Chester and Peter hop back on the Falcon and head back to Chattanooga. When they got there, the Special Forces had already left. Peter and the rest are astonished that Chester kept their old base, and had brought it all the way from Sanfransokyo! Chester opens the bay doors and brings the base up. The Falcon lands on the top landing pad. Shifu queues the music, and everyone starts feeling the beat. Chester claps his hands, “Are y’all ready or ARE YOU READY?!” Everyone yells, “READY!!” Chester prepares some storage containers and fills them with some Zochnology. He then takes them to the Pentagon. Po and Shifu get defense systems, and their ships are checked up and running. Buttercup monitors where the `COSMO` is, and Peter upgrades their current setups. Fink builds a defense system satellite all around Earth, just above the Karman line. Fink’s power never got back to full percent; it stayed at thirty percent of the needed parts. The rest slowly regained theirs, but not enough to help. Steve informed Chester that the rest of the countries will help us, but only because they're after everyone. Chester returns to base

and gathers some more Zochnology. He'll upgrade each country's Zochnology only to a certain extent, due to mass overpowered nations.

Buttercup notices that the COSMO already had its engines and power mains back up and running long ago, and that they're halfway to Earth from where they were! She hacks into their com system, and listens to what Commander Chrono is saying, "So, the US leaked my plan! And now the whole world know! The traitors, I knew they couldn't be of any use!" Lieutenant Horo speaks, "They were forced to speak by truth serum, that wasn't their fault!" Commander Chrono turns around briskly, "Yes I know that, I'm just saying that I could've gotten better people to do the job. Go and enable the Hyperdrives!" Lieutenant Horo shivers, "The Hyperdrives? You know they haven't been properly tested, and we don't have the proper systems to use them." Commander Chrono growls, and walks forward, "Son that is an order! Go and enable the Hyperdrives!" Lieutenant Horo stands his ground, "I shall not be the one, to potentially destroy us, this ship, and surrounding allies. I won't enable them." Chrono hisses, "Must I do everything myself?!" As he walks to the zelevator.

Even though a war is coming, that doesn't mean the world forgets being power hungry. When Chester says he's done upgrading, they all plead for more, and Russia almost threatens him! But Chester just told them the truth, revoked the threat, and left. No one bothered to ask him for more after the Russia experience. Fink has built a ring of Zochnology Cannon Satellites around Earth; he's now working on a second ring of Zochnology Laser Satellites. Peter upgraded their ships with full Zod crystals for every system and their base. Red Attack Crystals for the Guns, Cannons, Plasma Weapons, and any other weapon component. Black Crystals for Shields and Plasma Shields. Grey Crystals for extended power and range of radars, communications, missiles, and Zolocrons. Purple Crystals for Dark Matter travel, and Internal/External gravity cubes. Blue Crystals for engines, Light-Speed Ion Engines, and Energy Cores. White Crystals for Magnetic Cloaking, Plasma Cloaking, and Radar Cloaking. Shifu and Po ran whole system diagnostics and got all their base gear working. They upgraded all

their suits. Each one has a Green Zod Crystal; this one can be put in and connected to all systems and works universally. The suits have radar systems, long-range communication, plasma shielding, Gravity Cubes, Magnetic plus plasma cloaking, wrist-mounted guns with Red crystal filling, climbing gear, search lights plus signal lights, Energy Core, and rocket boosters mounted in the boots. They also put Yellow Zod Crystals in each system and connect them to it.

Chester gets back from his upgrade run, Buttercup records all of the data from the COSMO, Peter, Shifu, and Po finish upgrading their systems, and Fink comes back from creating five rings of Zochnology Satellites. They group up, and Buttercup tells everyone what she found out, “I overheard Commander Chrono and Lieutenant Horo argue, they’re enabling Hyperdrive Engines!” Chester shakes his head, “I didn’t realize they had those. I would’ve destroyed them. I fear they’ll get here by tonight.” Buttercup mentions, “I also heard them say that they never tested the Hyperdrives, and Chrono told Horo to enable them, but Horo refused, and Chrono stormed off to do it himself. They might work, but they might not.” Peter speaks, “Do we have an actual plan on how to defeat them?” Shifu sighs, “No, we actually don’t. Does anyone have any ideas?” Po suggests, “What if we break them out of Hyperspeed? If we destroy the gravity containment field in the ship, and then destroy the Hyperdrive, they’ll hit a brick wall!” Fink talks, “That would work, if we had a way to achieve Hyperspeed, it’s much faster than Lightspeed, and we don’t currently have powerful engines, or enough crystals. I suggest we weaponize an entire planet! I say we turn Mars into our own weapon planet. We can use Dark Matter for engine power, and one of us can visit the nearest Zod Crystal Planet and grab some crystals. I know of a planet that is made entirely of suitable alloys. We can scrap that for weapons.” Chester and the others nod, “Yes, I think that would work. Shifu, go to the nearest Zod Crystal Planet, and bring tons of storage containers with you. We need mass amounts of crystals. Buttercup, can you take the Falcon Maximus to the alloy planet and scrap as much metal as you can? Peter, there is another Zod Crystal Planet nearby; you can go to that one. Po, Fink, and I will go to Mars to prepare and start building. I’ll inform the countries of our plan and the current situation. 3. 2. 1. (everyone yells in unison) GO STEALTH ALPHA FORCE!”

Chapter 16: Mechanizing Mars

Peter and Shifu hop in their planes and connect storage containers to them, “Flight systems on, Ion Light Speed engines on, let's ride!” Peter and Shifu take off the ramp with a loud whoosh! Buttercup preps the Falcon for extra storage, containing, and jumps to Light Speed for the alloy planet. “Stealth Alpha Force calling all nations, the COSMO has enabled Hyperspeed, and its ETA to Earth is 6 pm tonight! You all have to work together with each other and us if we are to repel an attack. We’re currently weaponizing Mars due to the mass of the oncoming threat. Be ready to send your entire fleet of space-worthy planes, and any nukes or missiles you might have!” Po and Fink speed ahead to Mars, and Fink builds systems for their planes to quickly build Zochnology systems. Chester catches up, and they start work on the massive cannons this planet will have.

Shifu and Peter arrive at the Zod Crystal Planets, the don’t get too close to it, put their breathing apparatus on, old style multi-tools, leave all tech behind, and go in. They are now cut off of communication, have no tech, and must recover as many crystals as their storage can hold. They start with cutting out outer layers of crystals, as they move in they reveal more main types, until they reach the crystal creatures. They kill only as many as needed, recover the Blue Zod Crystals, and keep mining. They reach a cave system, and head in, this is where lasers and dangerous creatures protect the Red, Black, and Yellow Zod Crystals. They continue this process for awhile, they keep sending their crystals flying through space, their planes are controlled by their OFSAI to gather all crystals withing certain range. Buttercup leaves Lightspeed upon the arrival of the alloy planet. She cuts pieces out of the planet with the Falcon’s lasers and uses the Plasma Guns to tear them into smaller pieces. This planet is massive, and the gravitational force is heavy, but Buttercup pushes the artificial gravity to outside the Falcon too, covering it whole, regaining regular gravity. She closes the cockpit hatch, pressurizes the cabin, and opens the Falcon’s top up. She picks up all the alloys and goes back to Mars to dump everything. She continues this until Chester, Po, and Fink deem Mars is ready.

With continues supplies, Chester, Po, and Fink can keep working on Mars nonstop. They dig into the center, to put a massive command center, drones, and AI Planes in hangers. They then create a massive Dark Matter Energy

Core inside the planet, this will power all needed systems and Dark Matter Ion Engines. They build cannons, guns, and lasers. They put a massive Plasma Shield generator inside the core, and fill the core with raw Plasma, that will last them years. The cannons are built on top and on the bottom of the planet. They can pivot a full turn around, and both cover every possible angle. They put guns under them, they turn around on a slider, and there's more than one on each slider. There's about one hundred massive guns on the two sliders. Lasers put all about the middle, each pivot on their own, not on a slider. There's about one thousand lasers all around the middle. Where there's no weapons mounted, there are some docking ports, they have Plasma Shields for keeping oxygen inside. If Earth is destroyed, they can all rush inside Mars. But they also put Plasma Shield generators all around Earth, they use Dark Matter in the Plasma, so it lasts longer. Mars can also send a burst of Plasma and Magnetic energy in all directions, they cannot effect their own planes or Earth, each of the systems have protection against this, but hopefully, the COSMOS doesn't.

Chapter 17: The Stakes Are High

The clock ticks, and soon it's time for Buttercup to finish her last alloy supply run and for Shifu and Peter to come back with their crystal supply. Chester, Fink, and Po finish Mar's last touches, and they rename it, Marz. When Shifu and Peter come back, Chester puts all the crystals in one main crystal room and connects each of them to their desired components. Chester and the others fly back to activate their base/Earth defenses and to prepare for the COSMOS to come. "Stealth Alpha Force to all nations, Marz is prepped and ready. Initiate full defense systems, and send your planes up here! The time has come." Chester and the rest make it to their base. They put base defenses and global defenses on alert, and they prepare to leave. They all look at their old base, flashbacks of old memories hit their minds. "This isn't just a base, this is part of our lives, we lived here, had fun here, made memories here." "Without this, we couldn't have started." "This is how we began." "And now we're leaving, and might never come back…" Chester breaks the talk, "Now that's not true, we don't know if Earth will get blown up or if something happens to us. We need to stay strong, heads and eyes up, no drowsy looks, let's face evil in its face!" Marz is on auto arm, all the

nations are prepped, Buttercup is flying the Falcon, Shifu and Po are manning its guns, and Peter, Chester, and Fink are out in their planes, awaiting what might be the greatest threat. Everyone is planted on the far side of Earth, where Marz is.

"Commander Chrono! Hyperdrives are failing! We can't leave Hyperspeed!" Commander Chrono hears one of his mechanics through the coms. "The Hyperdrives are also tearing apart!" Commander Chrono quickly grabs hold of something, the entire ship shakes suddenly, and leaves Hyperspeed. Everyone on the ship gets jolted, falls down, and is either injured or passed out. When Chrono awakes, he notices he's in Earth's Solar System, right next to their sun. They had overshot Earth and exited right behind the sun. Commander Chrono chuckles, "Change into planet mode, prep all weapons on standby, men, take your stances, be ready to exit and fight on my command, set a course for Earth, and keep hidden behind the planets." The giant ship turns into a giant mesh of moving parts, and ends up as a giant mechanical planet! The engines turn on with a hum and start moving around the sun. The pass Mercury, then Venus, and set a B line for Earth. Commander Chrono starts the intercom, "Pilots, exit the COSMO as soon as they start firing upon us! The rest of you, man the guns!"

Chester and the others are still waiting on the other side of Earth. "It's hit 6:05, I would've expected them to exit Hyperspeed by now." "Maybe their engines failed?" Buttercup makes a scan, "I see no scan of the COSMO, but they might just be hiding in planet form." Chester shakes his head, "We'll give them a bit longer, and then we might lay this off." Suddenly, their scanners light up with dots, a planet-sized reading appears, and all their near side of Earth defense satellites are firing upon planes, and Earth's cannons are shooting a massive planet! "Chester! They overshot us! They left Hyperspeed past the sun! And snuck behind the planets to surprise attack us!" Chester growls, "Blast those Zods! Now we have to get Marz all the way to the near side of Earth! Tell the other planes to head over to the other side! I'll guide Marz around." Earth's shields are taking serious hits, and all the

satellites are destroying planes by the second, but the COSMO has a seriously large hangar, and they just keep coming! Earth's cannons are doing well at keeping the COSMO from getting too close. But the shields take hits from Plasma Cannon shots. The Shifu, Fink, Po, Peter, and Buttercup, with the other planes, arrive at an unforgettable sight! "Wow, look at that thing! It's bigger than I thought!" "All those planes, too, and they just keep coming!" "Keep your minds focused and eyes on the enemy planes! I'll personally damage the COSMO!" Chester connected to the Marz Main Computer and turned its Dark Matter engines on. It soon comes around Earth and starts firing, hard! "Did anyone call for a juggernaut?" Chester says through the coms. Back on the COSMOS, Commander Chrono sees the massive planet come around Earth and fire upon him and his ship. His smile starts to fade, "BLOW THAT THING OUT OF HERE!" The Marz draws the fire away from Earth and to it. Marz fires its cannons at the COSMO, while the guns are taking planes out of the sky, and the lasers are both damaging planes and cutting through the COSMO.

Commander Chrono is falling about in his ship from all the Plasma shots. "Lieutenant Horo! Activate the lasers and Dark Matter guns! I'm going out there to wreck havoc!" Lieutenant Horo takes command of the COSMO, and opens it's laser and Dark Matter Gun bays open. Space becomes more and more filled with laser beams, gun fire, and planes!

Buttercup is flying right next to the COSMO dropping the whole Falcon's supply on it! Chester comes by and notices something come out of the COSMO, he zooms in, he realizes, Commander Chrono is here! He sees a bright orange light come from his plane, his computer systems light up with nuke warnings! "Super nuke shot, twelve o-clock! Shoot it!" Shifu locks onto it, and blows it up. A giant ball of orange fire lights up, it destroys some Zod planes exiting the COSMO, and engulfs Commander Chrono's ship too. Chester keeps an eye on the cloud… Commander Chrono comes out! Firing gun shells at Chester! Chester takes evasive maneuvers. "You animals! I can smell you're heroic scent from here! It disgusts me! I'll shoot you out of the sky, even if I have to take you with me!" Chester gets shot by a missile, his shields take the beating. "Commander Chrono! Your time, ends, NOW!"

Fink looks at the ongoing fight, “It looks as if, we’re winning!” Shifu glances, “Yes it does! Whoo!” Suddenly, the COSMO sends a shock wave of Plasma towards Earth! It’s satellites and Cannons are disrupted. “Buttercup losses breath, “NO! Marz can’t stand one to one against the COSMO!” Marz returns fire with its own Plasma Shock! It disrupts all current Zod aircraft in the sky and disables the COSMO Dark Matter Guns! But aircraft keep coming out of the hanger! Buttercup moves into position to send a large Plasma Shot inside each hanger. Chester is swerving around dodging gun fire and missiles while returning the fire! Peter looks at his monitor, “Everyone, Earth’s shields are down! And Marz’s! We have to destroy the COSMO!” Buttercup links to the base weapon system, she presses a button, and a flurry of missiles whoosh out of there! Peter looks at Earth, “Buttercup, what did you do?” Buttercup chuckles, “You’ll see!” The missiles zoom through the sky, and hit the COSMO, they, were super nukes! They all see a flicker of blue around the COSMO, and then, nothing. The nukes destroyed the COSMOS shields. But its still firing, and Buttercup used all their nukes!

Both Chester and Commander Chrono’s shields have been broken and are taking serious structural damage! None of them back down however, and they keep firing at each other. Chester thinks to himself, “I can’t die now, not now nor here, I can’t do that to Buttercup, the world, or my team! If only my powers were working, then my plane’s power would work too!” Suddenly, Chester gets jolted and shot through space like a bullet! Chester takes a look, looks at the distance between him and Commander Chrono, smiles, and turns around to face him! “The tides have turned!” Buttercup, Shifu, and Po have successfully Plasma Bombed all of the COSMOS hangers. But it’s still firing! Marz and the COSMO both are lighting up with warning systems, but they keep firing! Peter thinks, “we need to destroy that thing, but we don’t have the fire power to do so. Marz does, but it needs a direct hit inside the COSMO. Guys! We need to open up a tunnel in the COSMO for Marz to fire directly into! If it hits the engines, Hyperdrives, and main power lines, that will cause a massive chain reaction, that will destroy it from the inside!” Buttercup charges up the Falcon’s cannons, Peter and Fink pull up beside them, and Shifu and Po un-dock in their planes. They fire a flurry of missiles, cannon shots, and Plasma Bombs towards the hull of the COSMO! They break into it bit by bit, until a clear path to the core is made. Peter calls off all ally planes in the area, and make their way to Marz! Marz’s computer

sees the opening, and positions to shoot! Chester flew past Commander Chrono so fast, he thought Chester jumped to light speed! He's looking for Chester, when suddenly, a flurry of shells is shot right at his engines from behind! He turns around to see nothing, suddenly, his underbelly is shot by a Plasma Shot! This time, he sees Chester fly straight up, like a shooting star! "Commander Chrono! Your reign of terror, ends, Right NOW!" Chester's laser charges with a loud hum, and fires a direct shot through Chrono's plane! Chester lets out his breath, and then sees Marz charging up for another shot, but instead of a bunch of metal tearing off the COSMO, he sees the shot disappear into it. Some sparks fly, and, a flash of pure white light blinds him.

Buttercup and the rest watch from Marz as it shot its charged Plasma Bolt directly in the hole they made. And they watched as the COSMO tore into a giant nebula of Dark Matter! "The battle has officially ended!" "Here Here!" "Well Chester, how does it feel to be back?… Chester? Hello? CHESTER?!" Chester is not with the gang at Marz, he's no where to be seen, on scanners nor sight!

Chapter 18: Lost In Space And Time

Everyone is panic-stricken! Buttercup starts curling up into a ball on the floor, pouring tears out. Peter blamed himself as "Secondary Leader," he should've made sure everyone was out, and he meant "Everyone!" Shifu and Po start searching through the nebula, and Fink starts up the Falcon's scanners. Shifu and Po found no apparent trace of Chester, nor of Lieutenant Horo or Commander Chrono. They move on to Marz and fire up the recorded data from videos and scanners. Fink can't find Chester anywhere! Not even out in the Cosmic Horizon, past there is no man's space. Marz's recorded data shows that just before the flash of light turned into Dark Matter, a signal disappeared straight from the scanners! But it couldn't track it. Peter drops his head, "Let's go back to base and regroup, we'll think about something." Everyone heads back to Earth with low heads and downcast hearts, especially Buttercup.

Chester hears hums, sees nothing but white, and a warning system. Chester blinks, but his vision doesn't appear. He feels around, its his F-35 cockpit, but he can't see it. "Did I go blind?! The COSMO explosion must have burned my retina. If its not too bad, it might heal, but for now… I,

Can’t, See!” Chester asks his OFSAI what state his aircraft is in, “Your aircraft is at one hundred percent durability, shields have been recharged, speed unknown, position unknown. Analyzing, speed found, speed is 1.2 googolplex miles per second and rising. Engine and hull durability, maintaining one hundred percent. Region analyzing, not in 2032, not in planet Earth’s universe, universe unknown.” Chester gasps, “a googolplex miles per second? I didn’t think that speed was possible, that’s faster than Hyperspeed! But, now where am I? It doesn’t seem like I’m in my universe.” Chester has his OFSAI take out some parts and build an Artificial Vision Headset. The AVH connects to Chester’s nervous system, and sends artificial nerve signals to his brain. Chester now has an image appear in front of his eyes! He notices his normal engines, Lightspeed engine, and speed boost power is enabled. He wonders if this was the key to true space travel all along, back in 1920, madmen tried to create wormholes and space travel, but they all failed. He turns his Gravity Cube to full force, managing up to a Googol Gs. He shuts off the speed power boost and Lightspeed engines, his speed goes from 1.2 googolplex miles per second, to 3.1 million miles per hour. Chester runs a full radar scan, it seems there’s a scan of a planet that has a match of Earth.

“Fink! Where’s Buttercup?” “Oh, her? She’s taking her anger and sadness out on our punching bag.” Fink walks downstairs to the gym, he can hear Buttercup really breaking up that bag, “Argh! Why?! Why me?! This happened not once! Not twice! But Three Times!…” Fink reveals himself, “what happened to him was not your fault. I know you might think it was, but Chester was, no, he is brave, he’s the leader we all asked for. He fought Chrono like a leader, and took him down. If Chester is gone, then it wasn’t in vain.” Buttercup shakes her head, she throws one last strong punch, and crumbles to the ground. “No, you don’t understand, he’s the only family I had left. I was an only child, and my parents died long ago. He’s my husband, and I feel something more heart rendering is coming, but I can’t be for certain.” Shifu and Po made a sweep all around the Cosmic Horizon, but they found nothing. Any further, and they get sucked into black holes. Past the end of the Cosmic Horizon, a massive black hole surrounds everything, with each nebula explosion and star forming, the black hole gets pushed back, but this process takes awhile. Fink had found no other existing video or radar data. Readings of the Dark Matter Nebula shows it will exist for the next lifetime.

Buttercup had to go to the hospital due to severe abdominal pain.

Chester exits Lightspeed upon entry of the “Earth reading” system. “Well, it looks like Earth, and the system looks like ours, and so does the Milky Way. But something is off.” Chester runs a scan, and he finds no reading of life forms with the same DNA as his teammates. He can’t find any tech reading either! “Chester fires up his OFSAI, Zay, run a full scan of this planet, and show me the map in my AVH!” “Scan complete, sending scan to your visor.” Chester looks around Chattanooga. All the buildings look weird; they were all old-fashioned cowboy look, they were made of brick and/or wood. Chester recognizes this; this is the aftermath of the American Civil War. “I jumped back in time? I have access to the chronoverse! But the question is, how do I get back? My tech isn’t fast enough or powerful enough to plot inverse travel. And the fact that I’m in the 1870s, if I show myself in these clothes, ship, or anything else, the timeline will change drastically. I must stay hidden and create a temporary base.” Chester thinks, “Zay, what is the most remote place impossible for humans to reach?” “Searching the geography of 1870’s Earth. Region found, cave found in the Mariana Trench.” Chester smiles, “Then let's head there!”

Shifu and Po return from their search, and Fink is done stripping through the archives. Peter regroups them. “Nothing!” As he pounds his fist into the table, “We have no trace of Chester! And this Dark Matter might be masking something.” “Where’s Buttercup?” “She told me that she had to go to the hospital for severe abdominal pain. I don’t think she’ll be released for a while.” Peter shakes his head, “All of us are broken, I’m not ready to lead a whole team of five! And I’m now short one person. We might’ve defeated the COSMO, but not without severe aftermath!” Buttercup walks through the door. “Buttercup!” “You're back already?” “What did the doctors say?” Buttercup speaks softly, “I’m pregnant… with… twins…” Everyone gasps; they don’t speak, knowing she is already at her breaking point. They let her be with herself in her room, without bother. The team doesn’t want to stop looking, even though there are no more leads. Yet they’re forced to stop, for nations are back to conquering each other, and the remaining Zods are furious.

Chester flies over Chattanooga and Sanfransokyo. “Wow, this is amazing, such old buildings, steam trains, and the Pony Express!” Chester flies over the Pacific and dives into the Mariana Trench! He finds the cave and lands,

and he takes all the working materials and builds a small base. He connects his OFSAI to it and his plane's crystals. He needs more materials, so he makes a search for an alloy or metal planet. He comes back with enough materials for proper building and testing. "So, what do I know? I can reach a googolplex miles per second; that's the easy part. I've reached speeds higher than my engines could yield when I used my powers before. And with the Ion Lightspeed Engines, I can reach far greater speed. But that alone doesn't grant us chronotravel. I also know that chronospeed is the speed where nothing slows you down, and you keep accelerating past your engine's yield exponentially. I also know that past the Cosmic Horizon, a black hole exists. So I can't have gone past that. Chronotravel must be in a different travel process. Zay, give me all that was recorded from just before the COSMO got hit by Marz, and up to when I woke up." "Recorded data found, sending to your visor." "There! You jumped to Lightspeed, noticing there was a mass of explosions coming. But the COSMO had depleted a large mass of Dark Matter everywhere, just before the flash ended, and I jumped to Lightspeed! Dark Matter! That's the key! I just need to find some Dark Matter to enter the chronoverse!" Chester makes some improvements to his plane. He needs to gather a huge mass of Yellow Zod Crystals from a nearby crystal planet. He comes back with enough for a lifetime. He needs to hold Dark Matter in his plane, but it's too powerful to be held by Zod metals, or regular crystals, even Red/Black Zod Crystals. But not for an entire case made of Yellow Zod Crystals. He puts the Dark Matter storage in the back and then starts working on a Dark Matter Hyperdrive engine. Now that he can store Dark Matter, he can access Dark Matter-powered systems. With that kind of engine, all Chester will need is his Lightspeed Hyperdrive and Dark Matter Hyperdrive to reach chronotravel entry speed.

Chester leaves his base, making sure to leave no trace behind. He exits and makes a beeline for the Cosmic Horizon to collect some Dark Matter. Chester reaches the Cosmic Horizon and collects as much Dark Matter as he can carry. He warms up his Hyperdrive engines, fires a shot of Dark Matter, and jumps. He opens his eyes, and he's still in the same system. "What?! It didn't work?" "Chester, recorded info says that the Dark Matter was fueled a bit by the explosion. May I suggest firing a Dark Matter blast and a Plasma blast?" Chester thinks, "That just might work." He charges up another Dark Matter shot with his Plasma Cannon. He shoots and jumps.

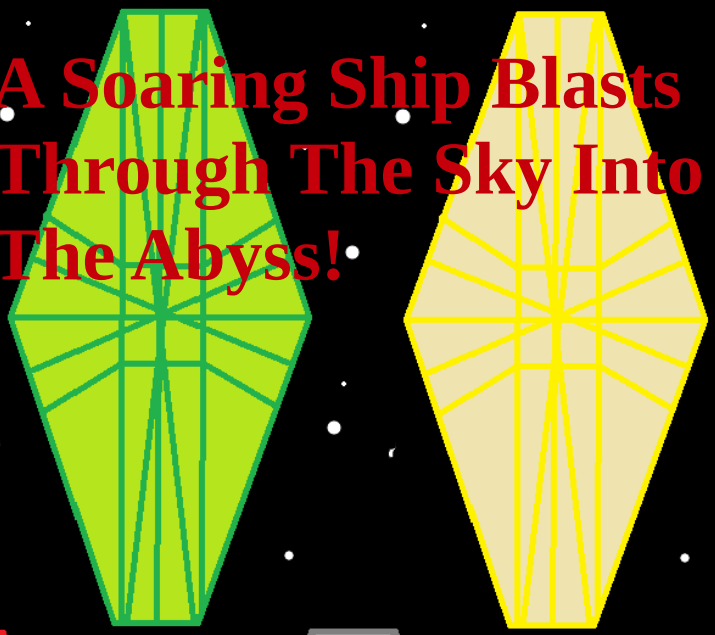

Buttercup, carrying a pup and a hoglet, has severe cramps, nausea, fatigue, muscle pain, drastic mood swings, anxiety, and more. Yet she can't wrap her head around Chester; she might never at this stage. She'll just have to wait. Everyone else is out on missions, and their heads can't wrap around Chester either. They'll have to wait too. Chester has entered the chronoverse! "Zay, scan for universes that have readings of an identical match to our Earth!" "Scan initiated, scan failed, upgraded sensor needed." Chester wipes his head, "I thought so, I picked up some Grey Zod Crystals while I was out, I'll plug some more into the radar." The radar hums even stronger once the crystal is put in. "Upgraded sensor, scanning now. Scan complete, universe found, ETA, nine months." Chester says, "Nine months ok," he looks at the map, then turns his head towards the scanner, "NINE MONTHS? Why did it take us so short a time to get here, and now longer back?!" "Speed is at one googol miles per second, time to reach googolplex miles per second, eight months, time after that, one month." Chester sighs, "I should've realized that the engines weren't powerful enough to reach quick chronotravel speeds. I guess I'll catch up on my regular life and hobbies while I wait…"

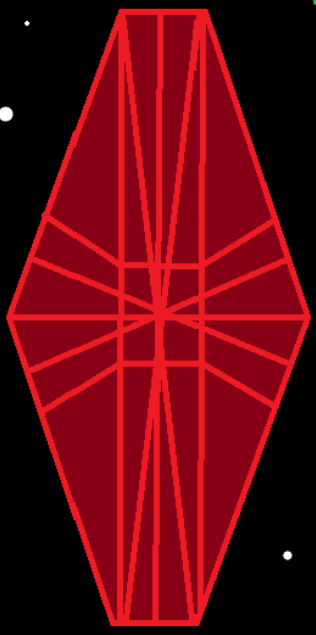

Back at home, Buttercup is almost bedridden all the time and is rarely seen out of her room. The others are slowly coping without Chester, sometimes unable to cooperate due to depression. Eight months pass, and Buttercup is in the hospital, counting the days till labor. The team is still working hard, but depression is at its highest. They seem to rarely get together at all anymore. Through miles of chronoverse, Chester is sleeping, awoken by Zay, "Speed at one googolplex miles per second, and rising. Time left to Earth, one month." Chester breaths deeply, "I wonder how the team did without me. I bet they really thought I was gone, and Buttercup? I hope she hasn't done something silly out of anger and sadness… What am I saying?! She would never do that. My team, I wonder if Peter was ready to lead a team of five..." "Shifu! Where is Peter?" "Gosh, your tone is high; we're in no hurry. I saw him storm out of here in his plane about an hour ago. You might be able to track him," Po grumbles, "blast that rabbit!" Buttercup hears the doctors say her estimated labor is in three weeks. She says to herself quietly at night, "Chester, Chester, where are you? I know you're alive, I can just feel it. Your children need you…"

Chester exits the chronoverse, plots a course for Earth, and stays in Lightspeed. When Chester exits Lightspeed, the first thing he notices is

what's left of the COSMO, the Dark Matter nebula. He sees that Marz is fixed up, active on standby, and is positioned where it should be. “Maybe my team is working without me.” Chester re-enters Earth’s atmosphere, wondering what everyone will say when he veils his face. “The first person I’m going to see is Buttercup, and I’m going to never, ever, scare her again, or leave her.” Chester lands outside his home, jumps out of his plane, and rushes inside. He moved so fast that his other teammates hardly noticed. “Peter! I need to talk to you!” “No, Po, I don’t want to talk, not now.” “You say that, but it’s always going to be next month. We have been losing morale and team power ever since Chester left. What do you think he would say?” “CHESTER… Chester is gone, and I’m what he left to lead us. I was never ready for this.” Po opens his mouth to reprimand him, but he’s stopped by Buttercup’s room door opening with a slam. They see Chester, exactly him, they can’t believe their eyes. “Peter! Where’s Buttercup!” “Chester!… She’s in the Erlanger East Hospital, room fourteen… But…” Chester runs out before he can tell him. Chester dashes through the hospital doors and asks the nearest service where room fourteen is. Chester finds the number fourteen above a room door. As soon as he opens it, his heart melts. Lying in the hospital bed, is Buttercup sleeping, and by her left and right side are a boy pup and a girl hoglet. Chester lets her sleep, and he makes his way back home. Peter calls everyone to get back, because Chester returned. Everyone is blown out of their socks and shoes to see Chester in front of them. “Chester, what is that on your head?” “Oh, this is my Artificial Vision Headset. The COSMO explosion burned my retinas, so I needed some sort of way to see. I don’t need this anymore, my eyes healed.” Peter hugs Chester, “I thought I was going to go crazy because I thought you were lost for good! I’m no leader you made me to be.” Chester shakes his head, “That’s not true, and you know it. I trained you to lead Shifu and Fink, and yourself. But I shall have to tell you, my role is no longer as a leader, but as a father. Buttercup and I cannot continue our journey with you right now. You must fully take my place as Primary Leader, Stealth Alpha Squad Leader!” Buttercup slowly wakes up, blinking her crusty eyes open. She can feel the breathing and heartbeat of her children beside her. She looks to her left and sees someone. She wipes her eyes and looks again. The figure sitting in the chair is a handsome, fatherly-looking person… Chester. Buttercup breaks into tears as Chester kisses her, “My lovely, loyal, husband… a father.”

A Soaring Ship Blasts Through The Sky Into The Abyss!

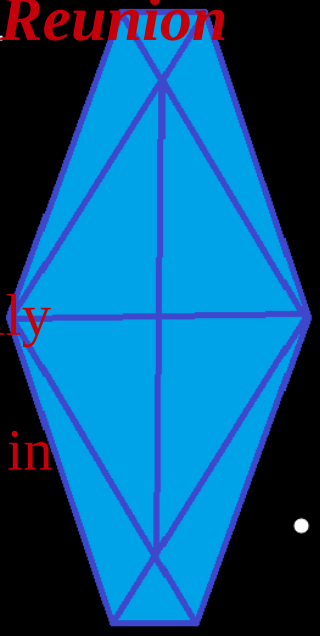

Somewhere In The Universe, Exists A Hedgehog, Dog, Panda, Rabbit, Another Panda, And A Fox. Lost Through Space, And Time Bent. With A New Superpower Arising. ***The Complete Chester and Buttercup: Separation and Reunion***
