The Complete Stealth Alpha Force
Benjamin Taylor

Chapter 1: New Beginnings

Date, 2027-03-30. The Stealth Alpha Force is a new force. Instead of just the Stealth Birds or Stealth Squad, They joined forces to make the Stealth Alpha Force. They live in Sanfransokyo living an adventurous life. There is nobody else that can match the Stealth Alpha Force's power. Except a few like the Zods or for a limited time like the communist countries. Nevertheless they always come out on top.

Chester's past. His role was the leader of the Stealth Birds. He had the F-35 Lightning and the F-15 Strike Eagle. His and his plane's power was pure strength. He and his plane had powerful strength and thrust. Chester, when he became the leader, was just a regular bystander living in Sanfransokyo. He went to the AAP regularly and there he got his interest in aviation. He also went to church and sometimes taught a Sunday school. He grew up in the United Kingdom and left to study aviation in the USA. He worked for a plane company fixing the engines. Later he then found the meteorite with Buttercup and that started his adventure.

Buttercup's past. Her role was the managing radar and ground missiles. She flew the F-22. Her power was being able to use an internal radar and take control of electronics. Her plane's power was the ability to take control of aircraft. She was that person where your like, I just like cool things. She never was serious she just liked things that seemed cool. The one thing she was serious was that she did communications in university. She worked for NASA a bit in communications and fixed their radios. She lived on a farm just outside of Sanfransokyo. It was there that her adventures with Chester would start.

Po's past. He came from the strange Zod planet. He though was no ordinary Zod. He was born like a smart panda. Not an unmerciful Zod. He didn't want to be forced to make super planes and technology for the Zods. So he put himself in an escape capsule and set a course for a far away planet. That one so happened to be Earth.

Peter’s past. When he first heard of the Stealth Birds he literally became their number one fan. He did aviation mechanics in university and made a lot of things related to the Stealth Birds. His one dream was if he could join the Stealth Birds. But he never thought he would become the leader! He and his friends at church always pretended they were the Stealth Birds.

Shifu’s past. He lead a Kung Fu class in China. He was the most advanced teacher there was. His family was martial arts teachers. That was in his family trait to do it. But there came a time when the teacher gets taught by the students. By the start of the summer all the students left to either be teachers or do college. That was the time when Po found him and asked him to be the second replacement.

Fink’s past. He and his family was never a city person. They lived life in the wilderness. When he was old enough he left to make a fox den for himself. He loved foraging for food and making stuff out of anything. That is where Chester finds him. He was making a model plane out of sticks and mud when Chester found him. That had already set him for the kind of special power he would have.

Chapter 2: Feelings Made

Date, 2027-04-05. It was a long day and Chester was a bit tired. Chester didn’t know why but ever since he met Buttercup he always wanted to be near her. He thought this was just being friends at first but he then knew it was more than that. His brain wanted to ask her out. Specifically if she wanted to go bowling that evening. He went to Peter and asked him if he wouldn’t mind taking the night shift. Peter did but asked why? Chester told Peter that he thinks he likes Buttercup so their going out to go bowling. Peter didn’t laugh, mock, or ask questions. He kept a straight face and said, “go ahead, have fun. Me and Shifu and take the night shift.” Chester was expecting at least a laugh or smile but was impressed. He and Buttercup went bowling that night and they also went to Showa; a fancy restaurant in Sanfransokyo.

When Peter told Shifu that they were going to do night shift and that Chester likes Buttercup. Shifu went into a laughing fit. Peter shamed him saying, “that’s none of our business! And we should respect it, not disrespect it by laughing! Keep a straight face soldier!” Shifu is now dumbfounded. He

understands what Peter is talking about and respects it. When Chester and Buttercup got home, neither Peter nor Shifu asked any questions. The next night Chester took Buttercup to a driving range. Boy was she great at it. She could hit a 250 yard drive. This time it was Fink who did the night shift. He was a bit more mannered than Shifu was. But when they were at the driving range there came an enemy. A Russian spy was watching the Stealth Alpha Force every move. He followed Peter to the driving range since he was the leader. He decided to use this time to defeat the Stealth Alpha Force once and for all. He did notice that the person next to them sort of followed them and took a close eye on them.

Chester notices this and decided to tell Buttercup. He called for their aircraft to be on stealth mode and hover above them. Chester does everything normal until the person walks away. Buttercup puts a tracker on him and watches all his moves. She finds out that he went and got into an aircraft. Probably intending to bomb the entire place since his armament is bombs. Chester gets into his plane and tells Buttercup to stay away from missile range. This would get nasty. Despite Chester in the air he still drops his bombs and Chester shoots them before they blow up. He doesn’t realize that he had a second armament with air to air missiles. He shoots 2 and they just past by him. But they explode just behind him. It sends him flipping forward out of control. But his plane has stabilizers. So he regains control and sends 2 missiles to attack him. They hit his engines and he ejects. Chester and Buttercup get home and tell them about the attack.

Chapter 3: Lost and Found

Date, 2027-04-09. Chester and Buttercup are out and the others are playing cards at home. They get a radio call saying, “we will have your leader!” Peter is now on his guard and sets everything to arm. But he doesn’t decide to bother Chester. He does though send drones to his area. Fink does a 150 mile radius scan of the area. He finds that there are multiple readings of vehicles near them and Chester. Shifu and Peter go out to intercept the enemy near them. But Fink is watching through the drones where the enemy near Chester is. Then all of a sudden the drones are disabled and Finks loses contact. Chester and Buttercup are having a fun time and are unaware of the situation. Then an aircraft comes and takes Chester hostage. Shifu and Peter immediately try to intercept it, but once it gets into space it escapes their vision. They disappeared into space. Nowhere to be seen. Buttercup is in despair. She couldn’t believe it. Why would someone kidnap Chester? This time she isn’t gonna runaway. But she is extremely sorrowful. Peter goes into space to look for Chester. He also takes Chester’s plane as well. He finds out that the Russians still work with the Zods. It seems that the Zods not only have planet bases.

But bases in Russia. Fink finds the Zod planet but not Chester. He is somewhere else. Fink doesn’t have a sufficient amount of nukes to explode the planet. He makes a system to trap the Zods in their planet. But Shifu and

Peter are looking for Chester in Russia. Po is destroying all the Zod aircraft and looking for their base in Russia. Shifu and Peter get a reading of a person that has the same DNA and everything of Chester. They locked onto that reading and flew towards it. Po found the Zod base and destroyed it. Zero Zod survivors. Shifu and Peter find the prison but the security is top notch. Peter decides to bomb the AAA nearby while Shifu bombs the airforce base. Then they will cut the roof off and rescue Chester. Fink gets home and wants to know if they found him. They did and they told him they won't need any help. Shifu and Peter execute the plan perfectly. They rescue Chester and the Russians are humbled again.

Chapter 4: The Unstoppable Six

Date, 2027-04-13. The Stealth Alpha Force is going on a mission. Except this isn't a hit and run mission. This is to test how good the Stealth Alpha Force really is. They shall be put up against Russia, China, North Korea, and finally the US. Peter and his team will be against Russia and the Chinese Air-force. Chester and his team will be against North Korea and the Chinese Military. And then all of them will team up against the US.

First the Stealth Squad will be up against the Chinese Air-force. This will be a full bombardment. The Stealth Alpha Force was able to easily double all that their going to fight so that no country is left defenseless. Peter and his team are in the air against China's whole fleet of aircraft. They launch missiles, proximity missiles, rockets, and guns. But Peter and the others dodged the missiles and rockets. Their planes had negative magnetism so the bullets got pushed away. They dearmed all the planes and shot them down with a sound pulser. The pulser made the planes break apart piece by piece.

Now they are against the Russian Air-force, Army, and Navy. The aircraft attack with missiles and guns, the Army attacks with AAA, and the Navy attack with aircraft, AAA, and missiles. As soon as the Stealth Squad got in the air there were hundreds of orange lights in the sky. But since they have stealth they can't track them. Only guns and rockets will work. Peter bombs all the ships, Shifu bombs all the AAA, and Fink shoots down the planes. Russia didn't survive this.

Chester's team is against the Chinese Military. The military shoots AAA and SAMs. There were so many that it looked like an orange cloud. They all

flew right past them and some exploded near them. But none of them did any damage. They came close to the ground and dropped tons of bombs. BOOM!

Now the Stealth Birds are up against North Korea. They have the Army, Navy, and Air-force on them. This time they use Nuclear Missiles. But Buttercup redirects them all into space. Then they bomb the ships and the AAA/SAMs. The aircraft are no match for them and get blown to smithereens. North Korea really thought they were gonna get them with the missiles.

The Stealth Alpha Force meets up in the US. They don't know where they will get attacked or how. All they know is that they will be attacked in waves. Not full blown all out. First will be the Army, then the Air-force, then the Navy, and finally the special forces. And maybe a secret in space. The army will attack with SAMs, AAA, high caliber guns, lasers, and nuclear missiles.

They first get attacked by nuclear missiles. Buttercup gets readings from space that multiple nukes are heading towards them. They immediately dodge since they are coming too quickly. They explode on the ground and their engulfed in the flames. But their shields hold up. This is the first time a nation on earth manages to get close to attacking them. Next tons of SAMs and AAA are launched from all over the desert. To their left, right, and underneath them. They take evasive maneuvers and dodge all the missiles. They missiles turn around and some turn on proximity. Half of them explode right near them and some hit their shields. The proximity ones don't damage

the shields but the others totally disable them. Then the lasers come out. The are swinging about anywhere in the sky. And there are a ton of them. Everyone is flipping around and dodging the lasers. Some hit them and damage the planes a bit. But they manage to get close enough to bomb them. Then the high caliber guns. They don't know when they will be shot. Randomly tons of gun fire is shot at the planes. Some of the control systems are damaged and a fuel leak is started in Chester and Fink's plane. They used a magnetic disrupter to steal and destroy all the guns.

Now was the Air-force. They use used and in service planes. The planes they use are the F-16 Falcon, F-22 Raptor, F-35 Lightning, F-15 Strike Eagle, AC-130 Spooky. The retired planes they use are the A-10 Warthog, F-106 Delta Dagger, F-86 Sabre, F-4 Phantom. Peter is like, "next time you start a competition make it a game of cards." Peter see's in use aircraft come from the North and South. Then retired aircraft come from the East and West. Peter was not prepared for this. Before they even think there are multiple missile warnings. They use the sound wave weapon to knock them off course. The higher altitude planes go high and the lower ones go down. Then the high ones dive down and the low ones start climbing. They both shoot guns and the older planes shoot rockets. Peter and his team shoot the lower planes and Chester shoots the higher ones. The lower ones were easy to shoot since they were going slow. But the high ones were going extremely fast. So they just shot right past. Because Peter has a high turn rate he was able to turn around and attack the aircraft. BOOM! BANG! No plane survived Peter's attacks.

Now it was the Navy. They also used former planes. The F-14 Tomcat, the AV8B Harrier, and the F-4 Phantom II. The Stealth Alpha Force were told to start flying near the Texas coast. There they were met by a ton of AAA and laser fire. Then they were met by missiles and nuclear missiles from submarines. Then all of their aircraft took off to intercept them. Since they don't have shields they have to be extra careful. Lasers passed by and missiles/rockets flew past. But none of them hit them. But trying to dodge them as well as fighting planes made it hard. Guns managed to damage the flaps and rudders. Proximity missiles were able to damage the engines and magnetic controls. But they managed to bomb all the ships and sink all the submarines with torpedoes that explode in close proximity. When they explode they release tons of shards that break into the submarine. All the

ships sink and so do the submarines. The planes fall into the sea and the Stealth Squad is now suffered serious damage.

Now it was the Special Forces. The Stealth Squad was never given a chance to repair their armor in any of these fights. Only when they changed countries. Since they were fighting the entire U.S. military they have low armor. The special forces have helicopters, high caliber guns, and ground attack vehicles. Out of nowhere gun shots are fired and helicopter rockets are shot. They splinter their fuselage and damage their engines. They use a magnet to pull their guns away and shoot their helicopter down. But his is the special forces we're talking about. They don't give up easily. They get into their ground vehicle and start firing at the planes. The planes however can just dodge and bomb them.

The final secret level is… the Space Force! The Stealth Alpha Force doesn't know this so they are attacked by space-planes from the sky. Then there are satellite lasers. Powered by the sun. If they get hit by this it's game over. One of them goes to space to destroy the satellites, while the others fight off the space-planes. These space planes have solar powered lasers too. They have to be extra careful. Lasers are everywhere. Fink shoots all the satellites down and the others shoot all the space-planes. But through all the different levels, the Stealth Alpha Force suffered very very! High damage!

Chapter 5: Farewell

Date, 2027-05-20. Shifu got a call saying they needed him back in China to teach another batch of students Kung Fu. The others didn't want him to go but he had too. He would be gone for 1 year. He would leave in 10 days and be gone till 2 semesters later. Also Chester got a call from the AAP saying they need him to help them for a year. Two of the team's members are leaving! They will only have 4 members in the Stealth Alpha Force. They pack their things, do some quality time, and they say farewell.

The Stealth Alpha Force immediately get a mission request form the USAF. They must find someone in North Korea and return them to South Korea. They don't know where he is but they do know his DNA. The leaving of Shifu and Chester makes it hard for them to focus. Nevertheless they find the person and bail him out. Chester is busy teaching an aviation class and Shifu is teaching some amateur students respect and humbleness. Then when

Chester is awake in the night he gets a call from the USAF. Chester redirects it to Peter since he will be the new leader for now. Peter gets the call and goes out on the mission.

But in Russia Vladimir Shutin knows that Chester is alone. When he is in a class the school warnings go off. Chester immediately calls for his plane and see's whats going on. He gets tons of missile warnings. Shifu is doing martial arts lessons. But then a person comes in telling them about missile warnings. North Korea also knew that Shifu was alone! Looks like Chester and Shifu won't get rusty on aerial fights.

Meanwhile back home; Germany is attacking the Stealth Alpha Force. The Germans joined forces with the Russians and North Korea. Ever since the Chinese stopped working with them. This is a new force the Stealth Alpha Force has been up against. They have powerful aircraft and missiles. The firepower is off the regular charts! Their shields are down by 5 minutes! They are swerving like crazy trying not to get hit. They manage to shoot down 10 before new planes come in. These planes attack with lasers! One of the shots hit Fink's left engine, which starts a fire. They shoot down all of these before shooting the others.

Chester and Shifu don't have any shields to start with since they used them to protect their school buildings. They were not prepared for a full on invasion. Since it was a 1v100 this was a hard fight. All the students were amazed about how well their teachers' fought. They both lost one engine and ailerons. But they managed to defend off the attack.

Because Chester and Shifu didn't expect to be attacked they didn't pack anything to fix their planes. Chester told Fink to make and send some portable fix systems to them. Chester got tons of medals from the AAP and Shifu got awards for honor and bravery.

Chapter 6: Germany Fights Again

Date, 2027-05-30. The Stealth Alpha Force is shocked that Germany joined Russia and North Korea. Now Buttercup is seeing a ton of enemy aircraft coming towards them. This time they use plasma bombs! They didn't think there was this type of technology yet! So when they hit the shields they broke. The Stealth Alpha Force immediately races to intercept the enemy. They shoot missiles and guns at them but it seems like they have shields too!

It took a lot of firepower to break the shields and even more to attack the planes.

The Stealth Alpha Force is still more advanced than they but the US is no match for the Germans. Peter decides to make some upgrades for the US. Their planes are upgraded with stealth and shields. Their army is upgraded with shields and advanced artillery. And their navy is upgraded with shock wave torpedoes and a rail gun! The US is now more prepared to defend an attack by the Germans than before.

Buttercup went to go and live with Chester in England. So it was back to 3 for the Stealth Alpha Force. Peter, Fink, and Po got a call from the USAF saying they needed them to escort and then watch over something very secretive. They escorted 10 super nukes. Soon there were 5 enemy fighters. Peter, Fink, and Po each took them down. But then there were tons of missiles inbound. This time they wouldn't let the missiles hit the bomb. They used sound waves to redirect the missile into space. Once they escorted it they landed, hid their planes, and started watching over the secret lab. Five days later there were multiple missile warnings. They waited until they were in sound wave range and fired multiple pulses. But these were super nuclear missiles! They exploded when they were 1,000 feet in the air. Luckily Peter had put a shield around the facility. They leapt into their planes and searched for the attacker. They found more missiles inbound on the radar. They shot those before they even got 10 miles into their territory. But then 5 more were

shot and 10 enemy aircraft escorted them. Peter is now more shocked than ever! Their planes can catch up to a missile?! They send tons of shock waves towards the missiles and shoot the planes down. Germany is asking so many questions to the Russians. The Russians tell them that they are the most powerful forces ever! The Germans are furious, but their supplies are depleted.

Chapter 7: The Return, The Finale

Date, 2028-05-30. Chester, Buttercup, and Shifu are coming back today from their 2 semesters. Before they leave they get a message saying, “we are always watching you!” Chester and Shifu are unfazed by this but they tell Peter to monitor their trip. Immediately when Chester gets into the airport and at his gate a few people try to kidnap him. Luckily Fink had stealth drones that would be monitoring Chester and Shifu. By the time they got on the plane there were already attempts like exploding the plane, or somebody in the plane who tries to kill them. It fails. Nothing bad happened to the planes either in the air or upon take off. But upon landing the landing gear failed. But there was no warning signs. The plane skidded across the ground and caught on fire! Fink immediately put the fire out and checked if everyone was okay. Everyone was okay except that Chester and Shifu were gone! Fink got a track on the enemy aircraft and intercepted it. It was the Russians. Fink took the plane out and brought Peter and Shifu back home safely.

Now that their back its back to the regular 6. But there’s no time for games. The Army, Airforce, and Navy needs them now! It’s a full on invasion from the Germans! Chester and Buttercup go to the army, Po and Fink go to the Airforce, and Peter and Shifu go to the Navy. The army is trying to defend against missiles strikes, the airforce is trying to defend against airstrikes, and the navy is trying to defend against nukes and missiles.

Chester and Buttercup are buisy repelling missiles and nukes. They use their sound wave weapon to repel it in a different direction or shoot it before impact. Then tons of tanks and men are coming from the shores. Chester and Buttercup race to bomb them before they bomb the army.

The tanks go up in smoke and the men are running in fear. This part is going okay.

Po and Fink are swerving and weaving through the sky. Trying to hit an aircraft. The planes however have a high turn rate so it is very hard to land a hit. Po releases one of his AIM-230 High Turn Rate Missile at them. It lands a hit before the pilot even blinks. Then they are bombarded with tons off missiles. They use the sound wave weapon to hit them off course. Their side is going okay too.

Peter and Shifu are looking out for submarines. They find a few and use shock wave torpedoes. If they find a ship they just use missiles on it. But the

one thing that is annoying are nukes. Once they shoot them they suffer serious damage to their shields. And so do the ships. But nevertheless they defend off the attacks on the navy side.

But then, a large siren goes off. The gang meets up and see's giant planes incoming. These are the German's secret weapon. It immediately starts shooting at them. These shells explode when close. Then it shoots large nuclear missiles that also explode when close. Their shields are already down. They shoot their full payload of weapons and… it does nothing. Peter and Chester have one last move. They turn on overdrive mode. With one missile the enemy goes down. Everyone else is closing their eyes thinking that Chester and Peter will blow up… but they don't! A while ago Chester and Peter made it where overdrive mode doesn't make the plane unstable.

Genre: Fictional Book
Fan Fiction

Written by Benjamin Taylor
Pictures taken by Benjamin Taylor

Short Autobiography: In a third person view. Benjamin Taylor loves aviation and building things out of cardboard. He plays on flight simulators and does Civil Air Patrol. This is his third book and he doesn't really like anything to do with english or literature. But he was very interested in making this book.
